

Selected Topics in Slavic linguistics

Slavic languages are sufficiently similar and sufficiently different to provide an attractive research laboratory. (Corbett 1998)

Agreement in Slavic*

The range of the phenomenon

- Defining **agreement** is difficult: “a quite intuitive notion which is nonetheless surprisingly difficult to delimit with precision” (Anderson 1992:103)
- The essential notion is relational:
 - **systematic covariation** of grammatical / linguistic forms, i.e. between feature specifications of two separate elements
 - yet, attempts to define agreement typically focus on the **elements themselves**
- Agreement is interpreted as inherently **asymmetric**
 - The element which determines the agreement is the **trigger**.
 - The element whose form is determined by agreement is the **target**.
 - The syntactic environment in which agreement occurs is the **domain** of agreement.
 - When we indicate visible effects of agreement, we are referring to agreement **features** (gender, person, number).
- Insufficient insight into the nature of the **relations** between ‘agreeing’ items (!)

Some non-trivial cases

● Analytical verb forms

Ти	си	щяла	да	дойдеш.
you.2SG	AUX.2SG	AUX.SG.F	PRT	come.2SG

Bulgarian: 'You would come (reportedly).'

● Co-dependents

Она	растёт	счастливым	ребёнком.
she.NOM.3SG.F	grow.3SG	happy.INST.SG.M	child.INST.SG.M

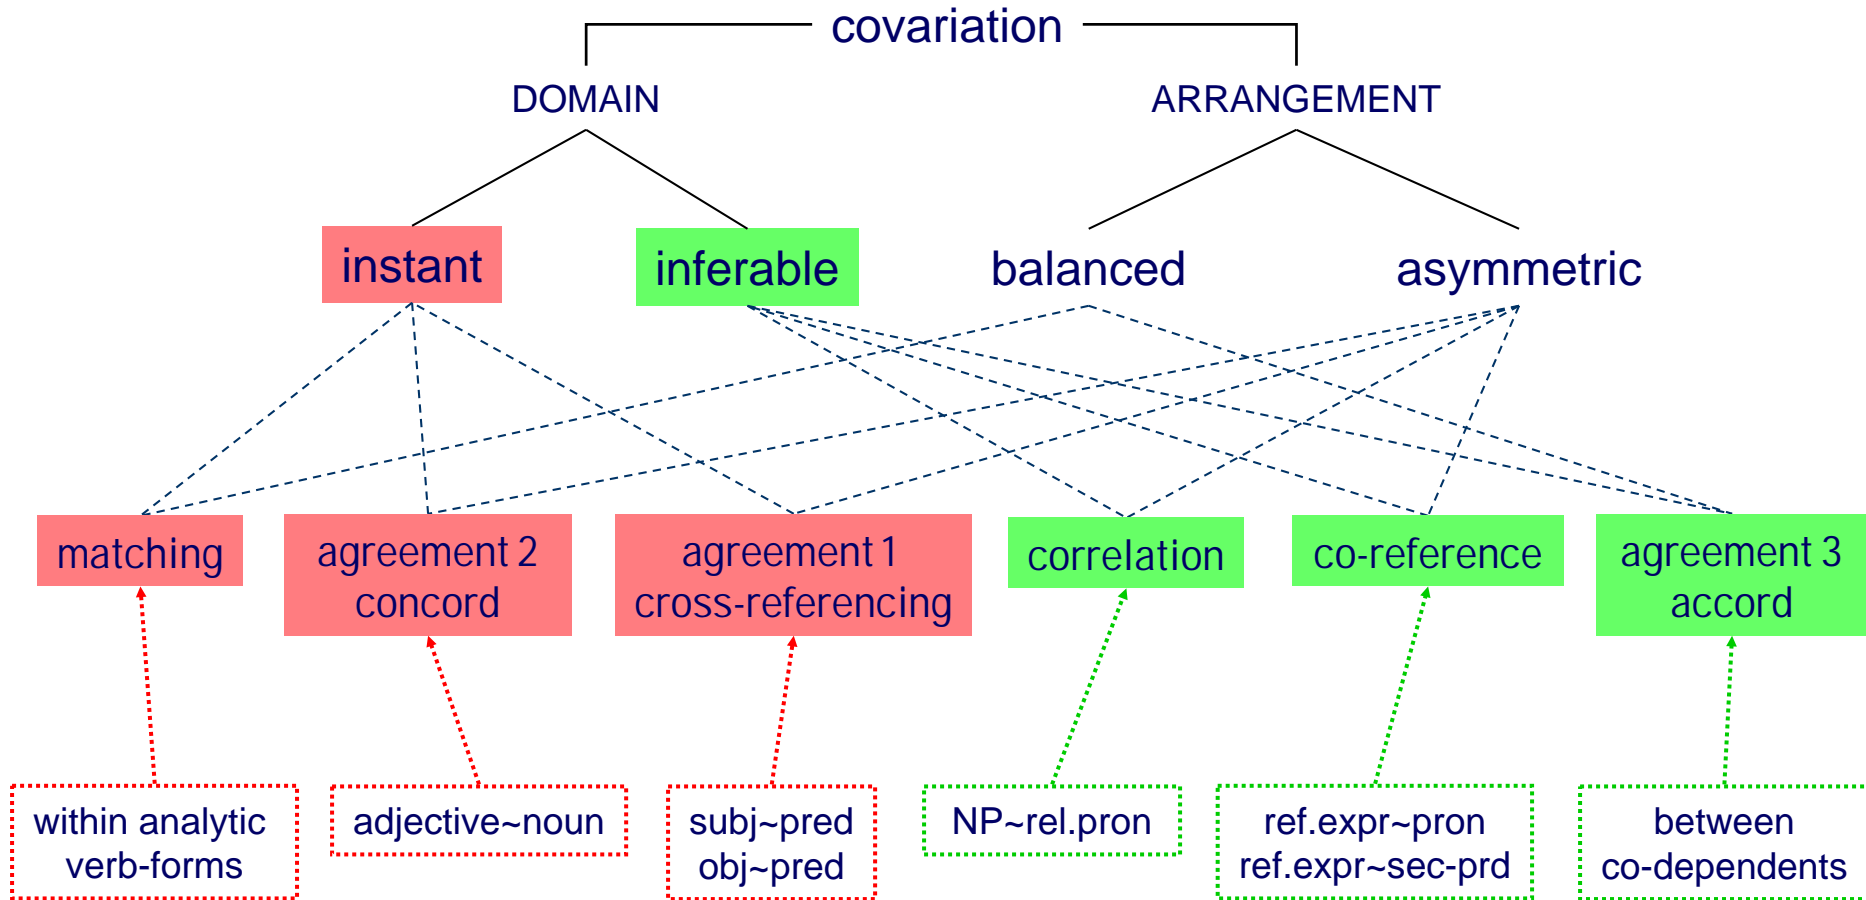

Russian: 'She grows (up) as a happy child.'

● Clitic doubling

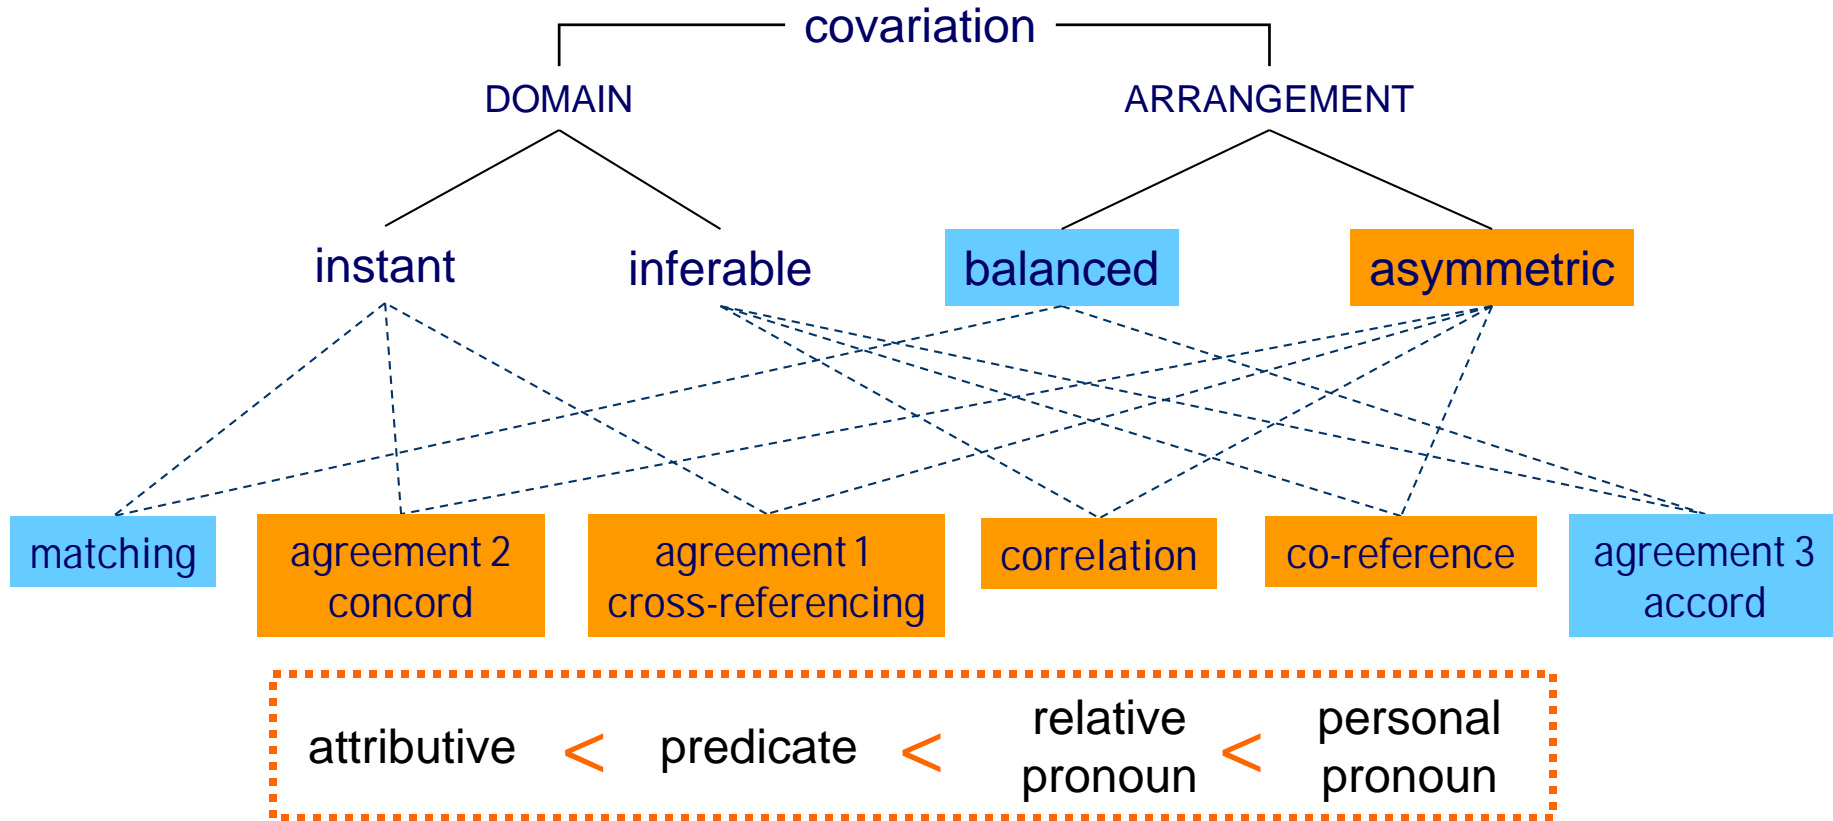

Мария	я	видяха	маскирана.
Mary.SG.F	ACC.3SG.F	saw.3PL	disguised.SG.F

Bulgarian: 'They saw Mary disguised.'

An ontology of covariation relations

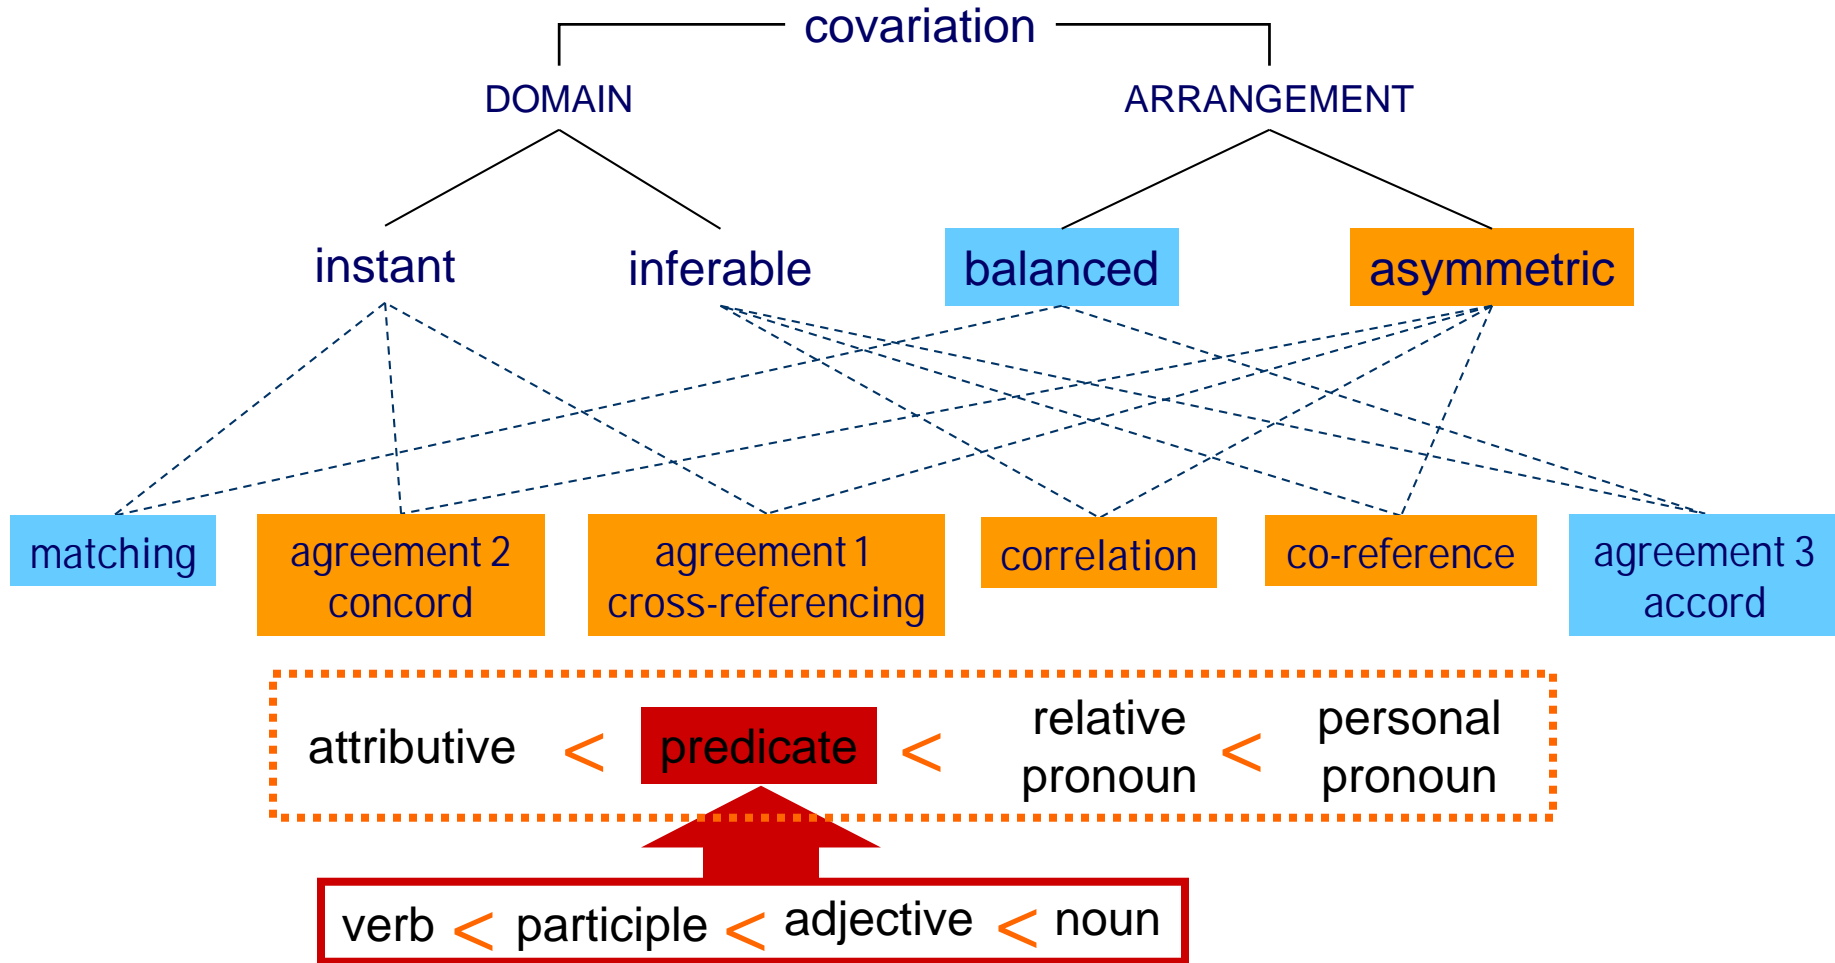

Accommodating the Agreement Hierarchy

“For any trigger that permits alternative agreement forms, as we move rightwards along the Agreement Hierarchy, the likelihood of agreement forms with greater semantic justification will increase monotonically (that is, with no intervening decrease).” Corbett (1979, 1983, 1991)

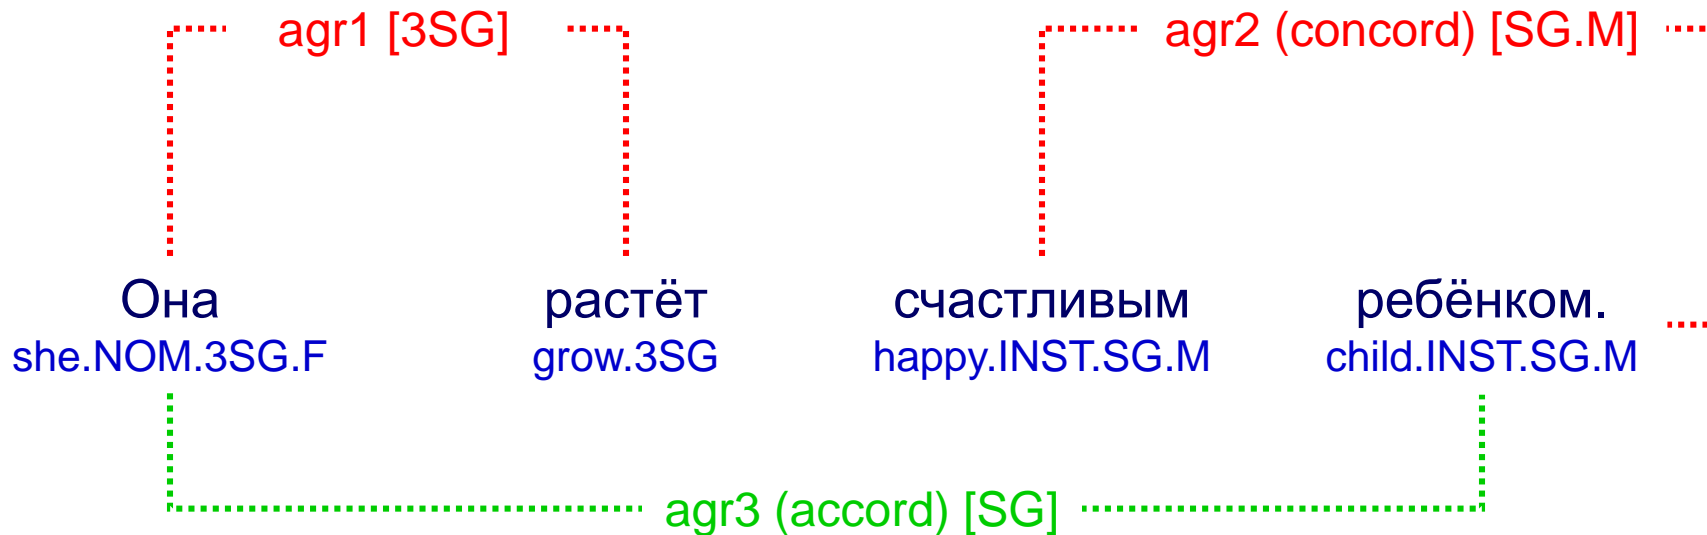

... and the Predicate Hierarchy

“For any trigger that permits alternative agreement forms, as we move rightwards along the Predicate Hierarchy, the likelihood of agreement forms with greater semantic justification will increase monotonically (that is, with no intervening decrease).” Comrie (1975), Corbett (1998)

Russian (ex.1)

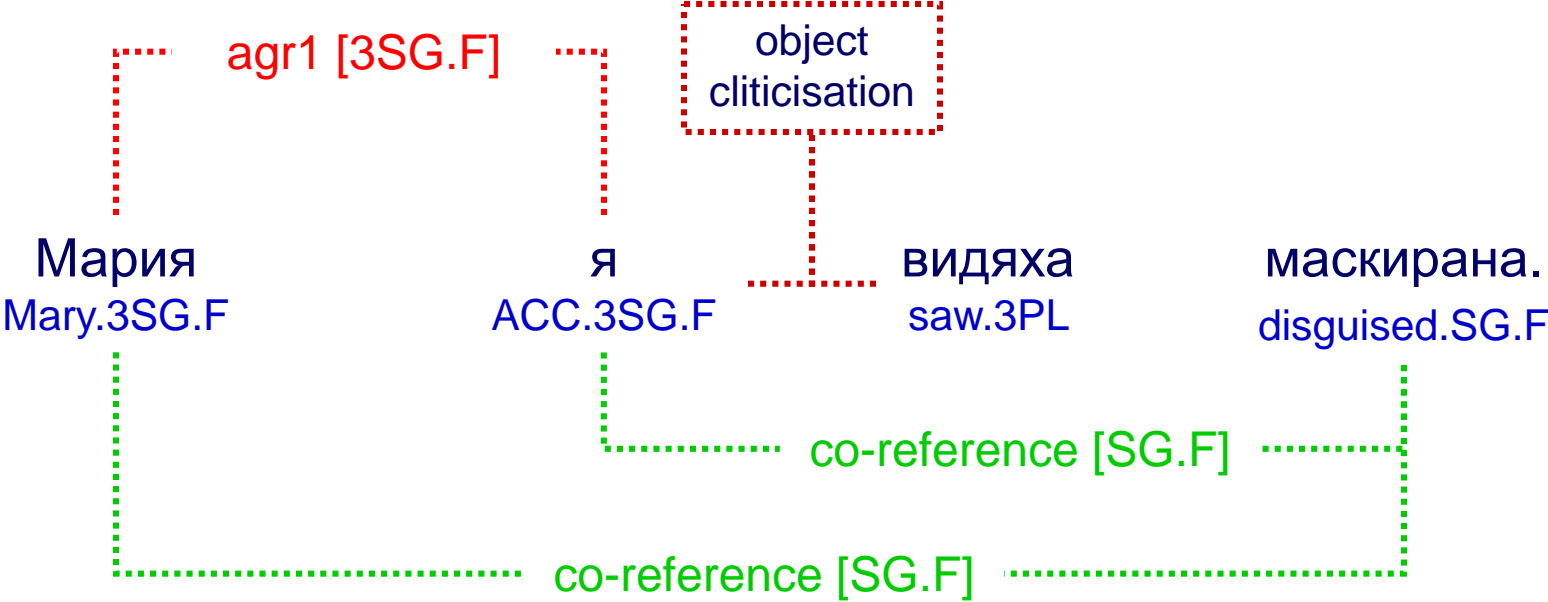

“She grows (up) as a happy child.”

agreement 1 (cross-referencing)

agreement 2 (concord)

agreement 3 (accord)

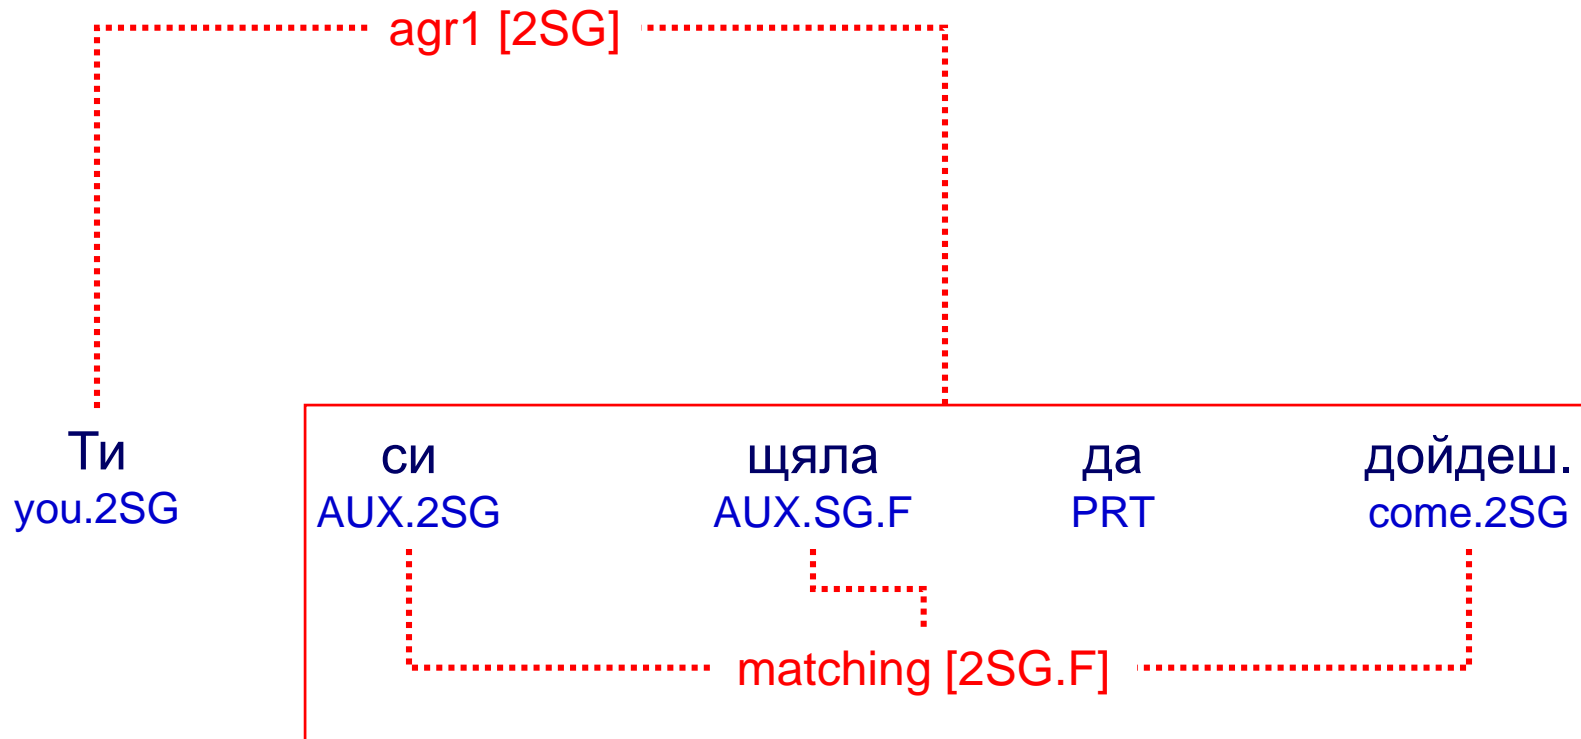

Bulgarian (ex.2)

“They saw Mary disguised.”

<i>agreement 1 (cross-referencing)</i>	<i>co-reference</i>

Bulgarian (ex.3)

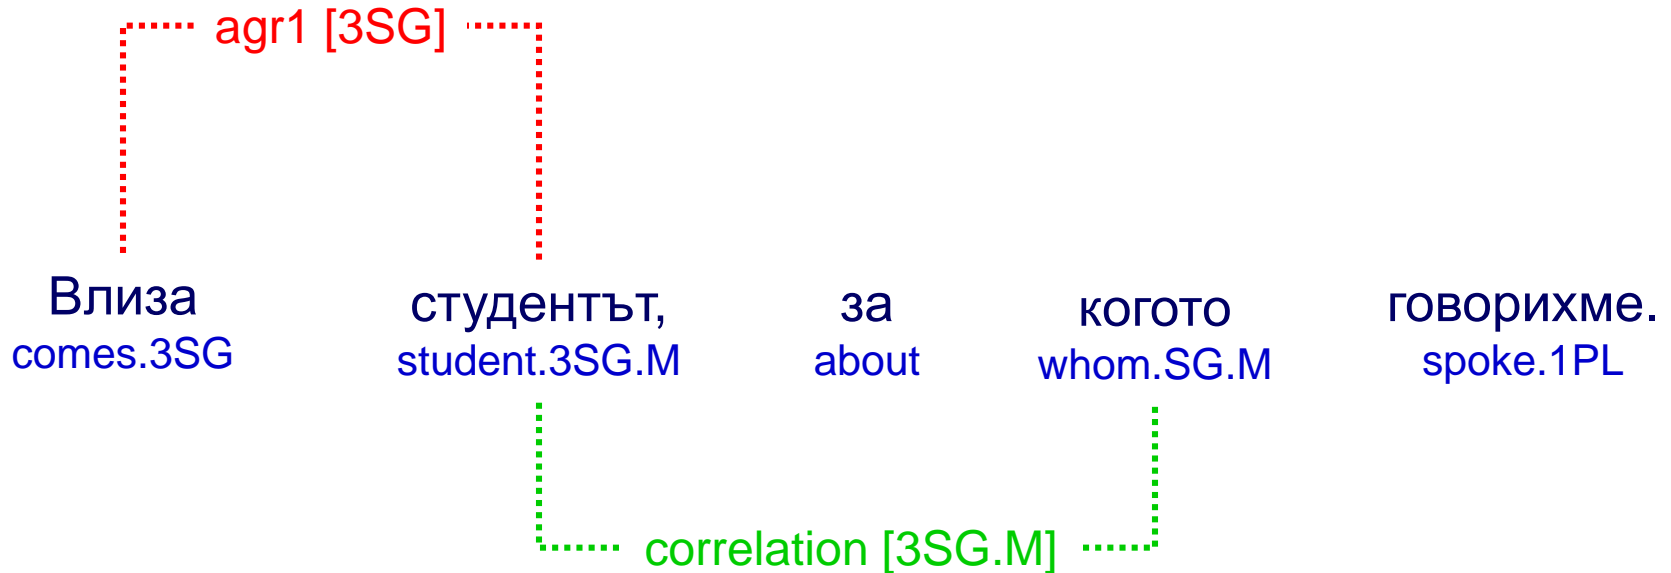

“You would come (reportedly).”

agreement 1 (cross-referencing)

matching

Bulgarian (ex.4)

“The student whom we talked about comes in.”

agreement 1 (cross-referencing)

correlation

1. Case in Slavic

- Common Slavic inventory of functional cases
- Functional and marking dimensions of case classification
- Shared Slavic case hierarchy **☒ functional interpretation**

2. Clitics in Slavic

- Common Slavic inventory of special predicative clitics
- Module of inflecting (aux & pron) clitics **☒ feature exponents**

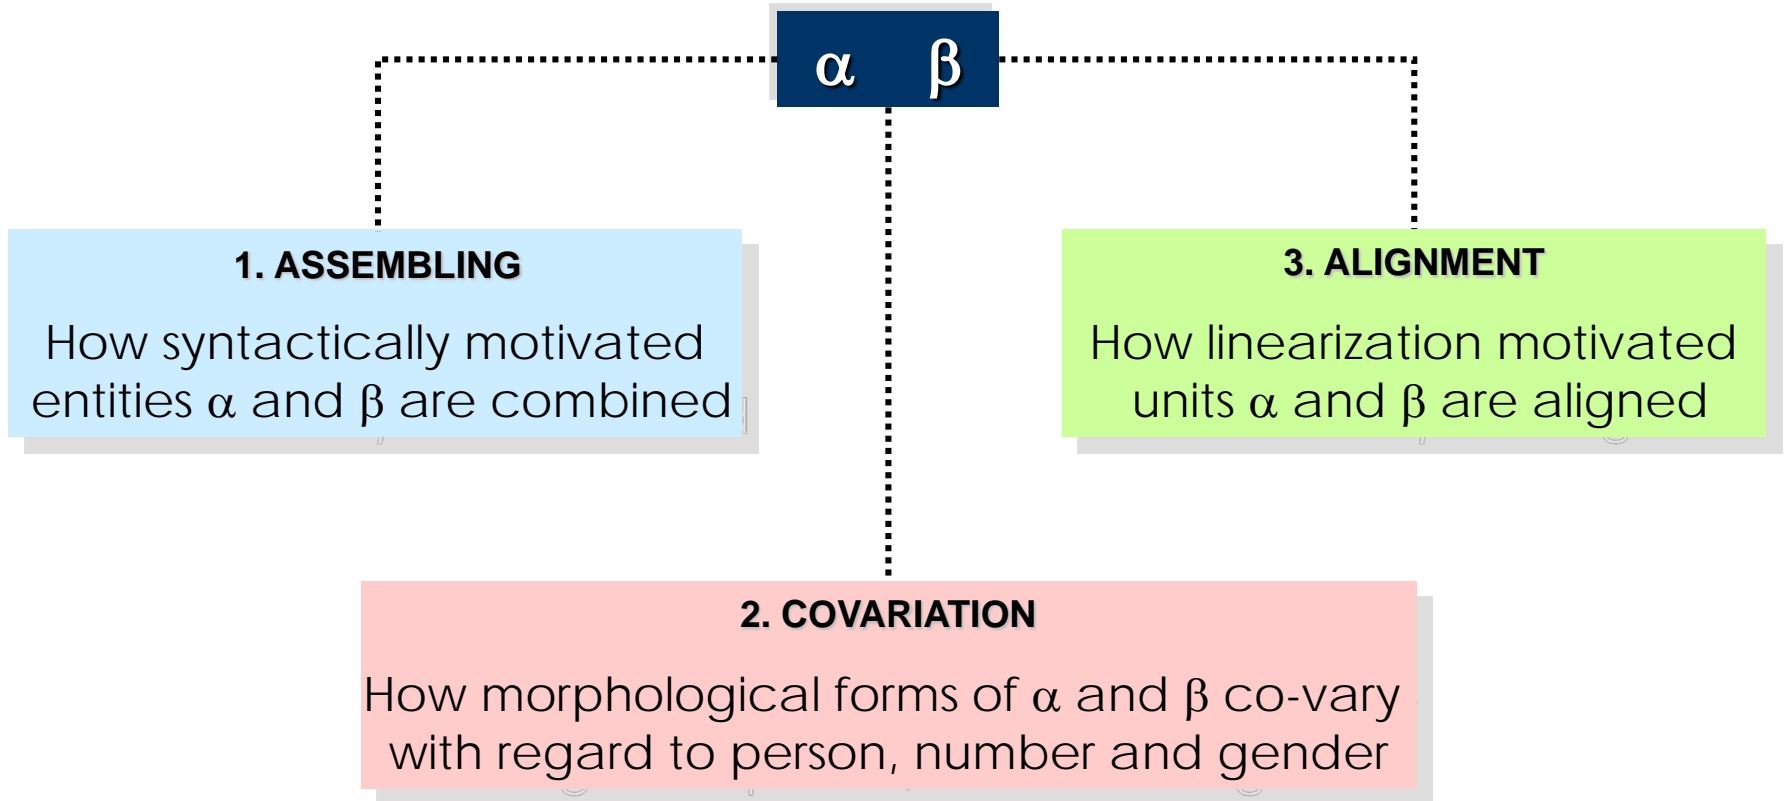

3. Agreement in Slavic

- Systematic relations of co-variation
- An ontology of co-variation phenomena **☒ generalized perspective**

Meta-grammar of systematic relations

A phenomena-driven approach to Slavic morphosyntax

Key to formalisation

- Grammatical representations
 - identify **linguistic items** of different motivation and complexity
 - encode **properties** of linguistic items
 - specify explicit or implicit **relationships** between properties of linguistic items
- Theory of systematic relations
 - assembling of syntactic entities
 - covariation of morphological forms in person, number and gender
 - alignment of linearization-motivated units
- Theory of linguistic items (!)
- Subtasks in grammatical research defined more cleanly

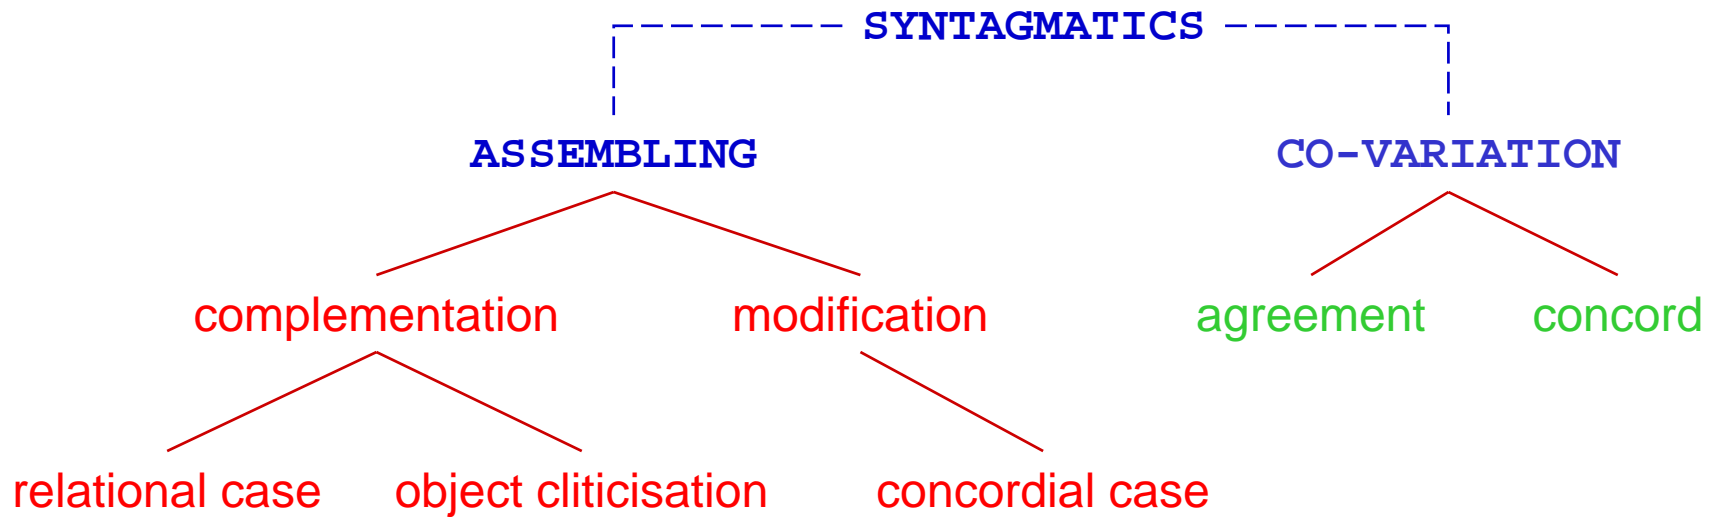

Metagrammar of systematic relations

Relational Charts

Sample systematic relations (fragmentary)

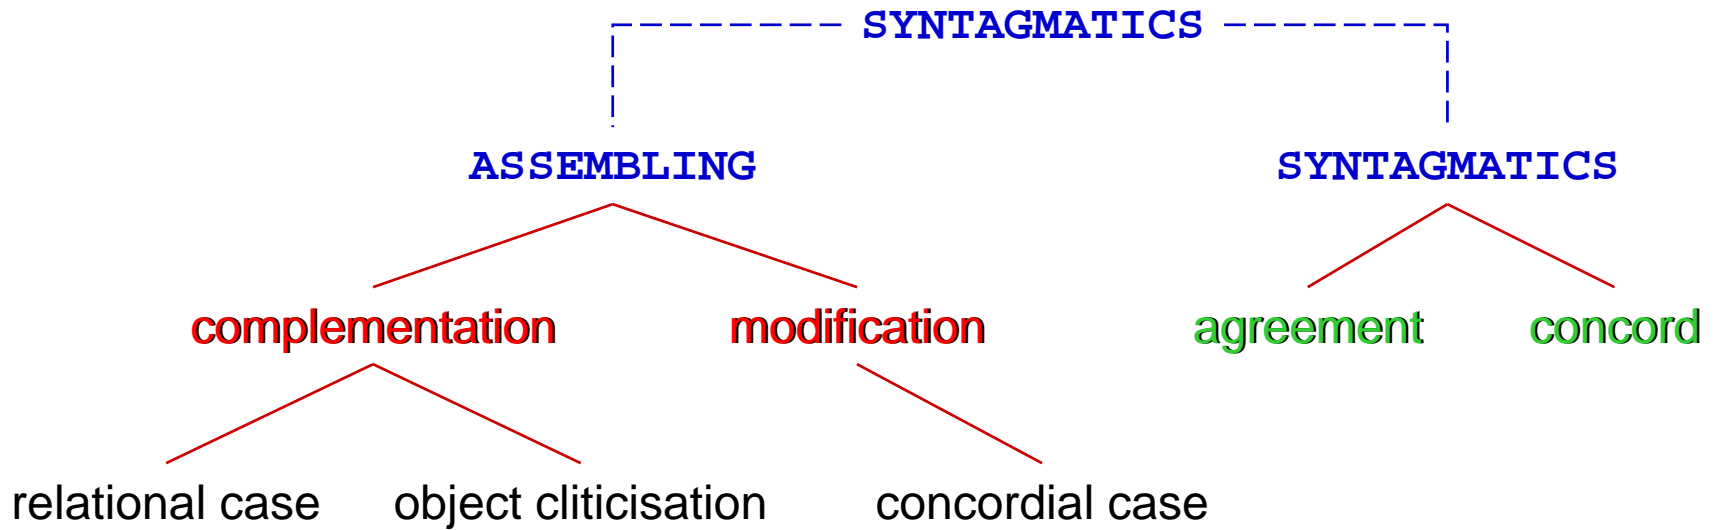

Bulgarian (ex.5)

Децата children.3PL	complementation agreement 3PL		
	ВИДЯХА saw.3PL	complementation	
		МАЛКОТО small.SG.N	modification concord SG.N
			КОТЕ. kitten.3SG.N

“The children saw the small kitten.”

Sample systematic relations (fragmentary)

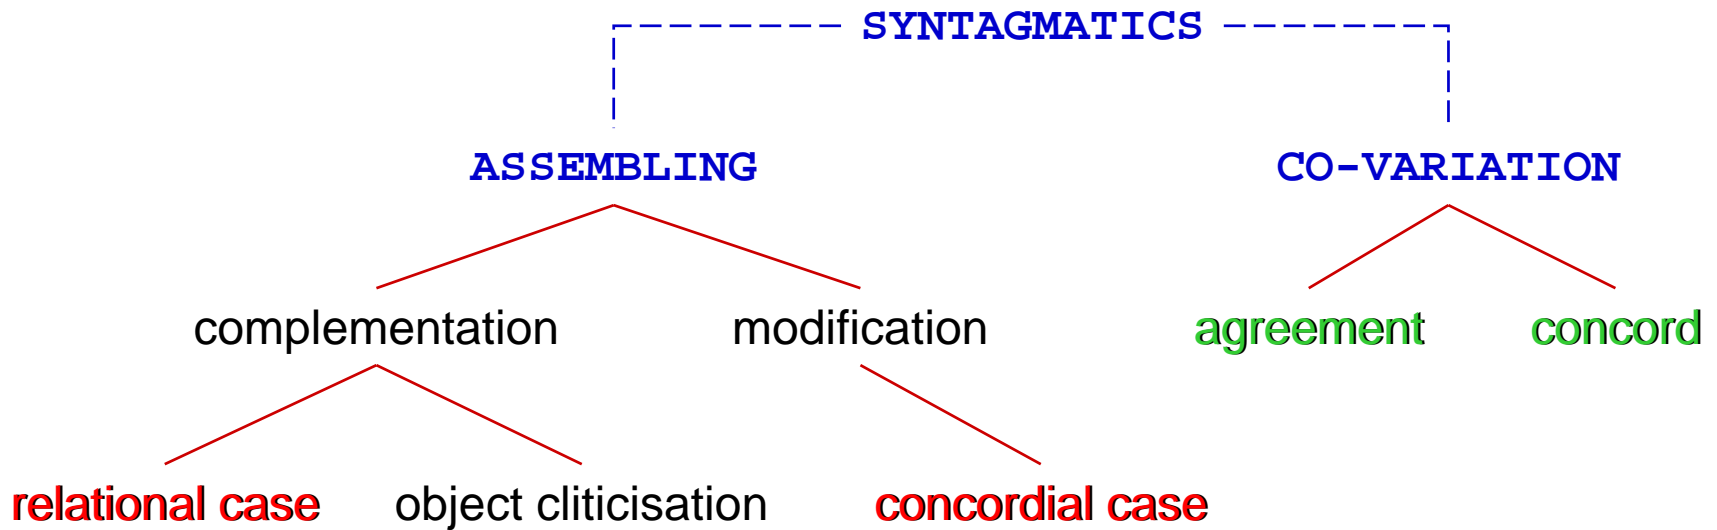

Russian (ex.6)

Дети kids.3PL.NOM	relational case NOM agreement 3PL		
	увидели saw.PL	relational case ACC	
		маленького small.SG.N.ACC	concordial case ACC concord SG.N
			котёнка. kitten.3SG.N.ACC

“The children saw the small kitten.”

Sample systematic relations (fragmentary)

Bulgarian (ex.7)

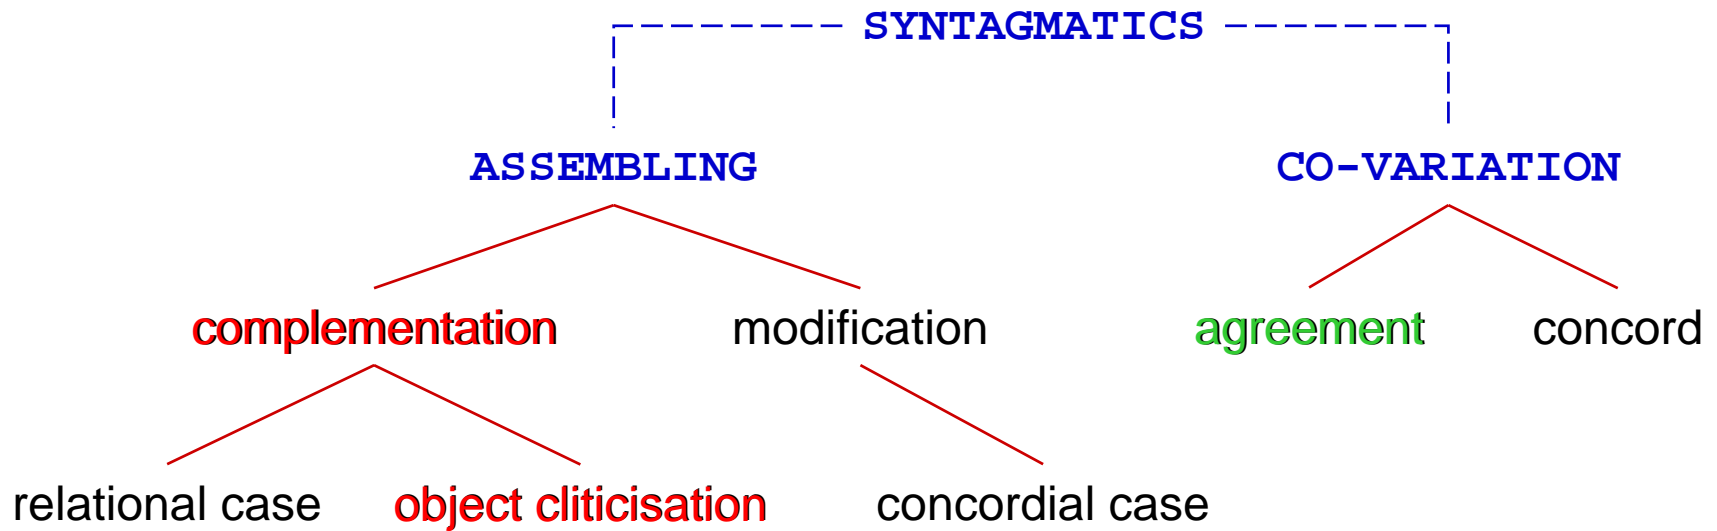

Децата
children.3PL

	complementation agreement 3PL	
ГО ACC.3SG.N	object cliticisation	agreement 3SG.N
	ВИДЯХА saw.3PL	complementation

КОТЕТО.
kitten.3SG.N

“The children saw the kitten.”

Sample systematic relations (fragmentary)

Implications for ...

- Typological research
 - grammatical relatedness “taken seriously”
 - cross-language interference
- Linguistically motivated modularity
 - patterns / strategies in bilingualism & multilingualism
 - inclusion of underrepresented and “small” languages
- Grammar sharing
 - for language acquisition
 - in technological applications

Facets of shared grammar
