

Smiles and laughter in conversation

Dirk Heylen Rieks op den Akker Renaud Deligny Gábor Nagy

Human Media Interaction

Research questions

- Do people look at other person when they smile/laugh ? Do they look to objects?
- Do people tend to smile and/or laugh on any specific Dialogue Act type or DA group?

Material

	total duration in sec	proportion compared to the duration of the video	Proportion compared to the duration of the speech	average duration in sec	average proportion	
video	1637	100%	-	409.25	25%	
speak	1463.365	89%	100%	365.84125	22%	
smiles and laughs	805.78	49%	55%	201.445	12%	

Note that there can be overlapping speech and overlapping smiles/ laughters

	number	duration in sec
Smiles	88	484.48
laughs	69	321.3
totals	157	805.78
% of smiles	56%	60%

Numbers = annotation stretches 1637 (seconds) / 157 = 10.5

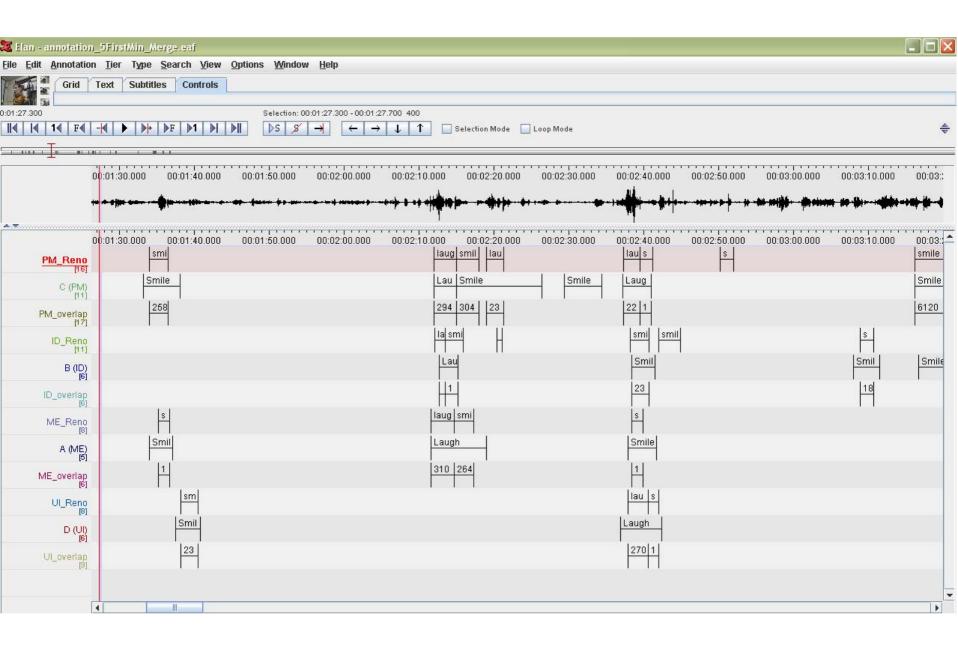

Reliability of the data

Test of reliability on 5 minutes of the video

- Annotated twice

	Number		Total
	of		Annotati
	Annotati	Average	on
total	ons	Duration	Duration
renaud	43	9.592312	111.277
gabor	28	18.05094	139.877
overlap	38	8.914255	92.019

- A lot of overlapping: a large agreement on the annotated parts
- Problem with the definition of the beginning and ending of smile (average duration different but almost the same time annotated)

Focus of attention Where are people looking at?

The Dialogue act

Questions

- Are numbers interesting or do need instances?
- How tied to this specific data set?
- What more numbers to get out?
- What insights have/could these numbers given/give us.
