An Introduction To Ontologies

- What are Ontologies?
- What do they look like?
- How can they be used?
- Why should we want to use them?

- Introduction to Ontologies
 - Philosophy and Information Science
 - Implementation of ontologies
 - Problems in ontology building
- Various uses of ontologies
- An automatically assembled ontology: YAGO
- Conclusion

Why we should be interested in Ontologies, Part One

Because they can help us solve some of the problems presented so far:

Ontologies can be used in Named Entity Disambiguation, are hugely important for the Semantic Web, etc...

Ontology in Philosophy

- „the science of what is“
- Among the first ontologists: Plato, Aristotle
- Questions: „What am I?“, „What is a physical object?“, „How do the properties of an object relate to the object itself?“
- „...*the theory of objects and their ties*“
Raul Corazzon, www.formalontology.it

Ontology in Philosophy - cont.

Shield of the Trinity
(approx. 12th century)

Ontologies in Information Science

- Form of knowledge representation
- Represent knowledge about the world - or more specific domains
- Use **concepts** and **relations** to form triples:

- Possible: Inheritance relations between concepts (and relations)

A Simple Example: The Pizza Ontology

- Aim: Represent knowledge about Pizzas
- Concepts (Classes): *PizzaBase*, *PizzaTopping* (with subclasses *CheeseTopping*, *MeatTopping*)
- Relations (Properties): *hasIngredient* (with subproperties *hasTopping*, *hasBase*)

pizza.owl Protégé 3.2.1 (file:/Applications/Protege_3.2.1/examples/pizza/pizza.owl.pprj, OWL / RDF Files)

The Pizza Ontology: Facts & Figures

- 98 classes, 8 properties, 5 individuals (countries of origin)
- Not complete (by far!), but easily expandable (more properties...!)
- Try to imagine a food ontology!

Ontology Building: Problems

„When I think of an ontology, I think of putting the universe in a bottle. It's a very ambitious thing to do. If you have a proper ontology worked out, it means you know everything about everything.

In general, the more useful an ontology would be, the closer to impossible it's going to be to make it.“

Found on the discussion boards on www.metafilter.com

Ontology Building: Problems - cont.

- Usefulness of ontologies depends strongly on the domains they are used in!
- Usual practice: Create reliable ontologies for small domains or domains that already make use of taxonomies (biology, medicine) rather than try to build a universal ontology.

Intermission

- ✓ What are Ontologies?
- ✓ What do they look like?
- ? How can they be used? ← now!
- ☹ Why should we want to use them?

A very popular application: WordNet

- A large* ontology for the English language
- Hierarchically organizes nouns, verbs, adjectives, and adverbs into synonym sets
- Also offers: antonyms, meronyms, etc. ...

* (147278 unique strings, 117659 synonym sets)

WordNet: Example

Noun

- **S: (n) [historian](#), [historiographer](#)** (a person who is an authority on history and who studies it and writes about it)
 - [direct hyponym / full hyponym](#)
 - [domain category](#)
 - **S: (n) [history](#)** (the discipline that records and interprets past events involving human beings) "*he teaches Medieval history*"; "*history takes the long view*"
 - [has instance](#)
 - [direct hypernym / inherited hypernym / sister term](#)
 - **S: (n) [scholar](#), [scholarly person](#), [bookman](#), [student](#)** (a learned person (especially in the humanities); someone who by long study has gained mastery in one or more disciplines)
 - **S: (n) [intellectual](#), [intellect](#)** (a person who uses the mind creatively)
 - **S: (n) [person](#), [individual](#), [someone](#), [somebody](#), [mortal](#), [soul](#)** (a human being) "*there was too much for one person to do*"
 - **S: (n) [organism](#), [being](#)** (a living thing that has (or can develop) the ability to act or function independently)
 - **S: (n) [living thing](#), [animate thing](#)** (a living (or once living) entity)
 - **S: (n) [whole](#), [unit](#)** (an assemblage of parts that is regarded as a single entity) "*how big is that part compared to the whole?*"; "*the team is a unit*"
 - **S: (n) [object](#), [physical object](#)** (a tangible and visible entity; an entity that can cast a shadow) "*it was full of rackets, balls and other objects*"
 - **S: (n) [physical entity](#)** (an entity that has physical existence)
 - **S: (n) [entity](#)** (that which is perceived or known or inferred to have its own distinct existence (living or nonliving))
 - **S: (n) [causal agent](#), [cause](#), [causal agency](#)** (any entity that produces an effect or is responsible for events or results)
 - **S: (n) [physical entity](#)** (an entity that has physical existence)
 - **S: (n) [entity](#)** (that which is perceived or known or inferred to have its own distinct existence (living or nonliving))
- [derivationally related form](#)

Why we should be interested in Ontologies, Part Two

- Philosophical / epistemological interest
- Because they are a fairly intuitive, appealing way of storing and organizing knowledge

Uses of Ontologies

- Semantic Web: Take meaning into account
- Store world knowledge → use to automatically draw conclusions based on logical rules
- Question Answering systems: Enable more complex / natural language queries

What do we want to use them for?

- We want to be able to look for things like:
 - *people who are scientists and musicians*
 - *people affiliated with Catharism outside the Languedoc region*
 - *when did Elvis win the Grammy Award?*
- a queryable semantic knowledge base!

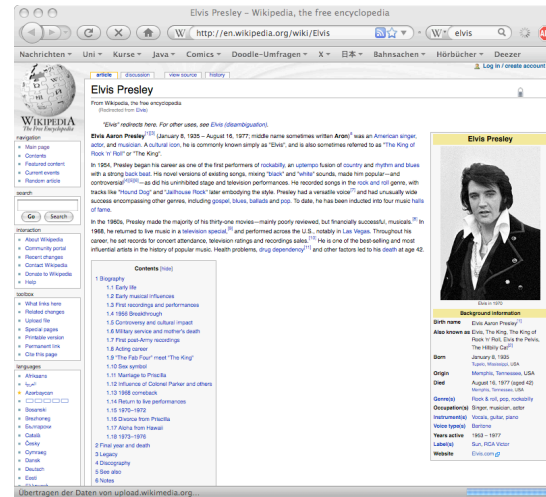

YAGO

- „Yet Another Great Ontology“
- Uses data from Wikipedia and WordNet
- Automatically assembled knowledge base
- Contains 2 million entities and 20 million facts about these entities

Where Wikipedia comes in

Or: How does the ontology learn who Elvis is?

➔ Answer: Just like everyone else!

...and what comes next?

Elvis Presley – Wikipedia, the free encyclopedia

From Wikipedia, the free encyclopedia
(Redirected from Elvis)

"Elvis" redirects here. For other uses, see *Elvis* (disambiguation).

Elvis Aaron Presley^[en] (January 8, 1935 – August 16, 1977; middle name sometimes written **Aron**) was an American singer, actor, and musician. A cultural icon, he is commonly known simply as "Elvis", and is also sometimes referred to as "The King of Rock 'n' Roll" or "The King".

In 1954, Presley began his career as one of the first performers of rockabilly, an uptempo fusion of country and rhythm and blues with a strong backbeat. His novel versions of existing songs, mixing "black" and "white" styles, made him popular—and controversial—on his unbridled stage and television performances. He crossed the divide between the rock and roll genre, with tracks like "Hound Dog" and "Jailhouse Rock" later embodying the style. Presley's "raspy voice" and had unusually wide success encompassing genres, including gospel, blues, ballads and pop. He has been inducted into four music halls of fame.

In the 1960s, Presley made the majority of his thirty-one movies—mainly musicals—reviewed, but financially successful, musicals.^[de] In 1968, he returned to live music with a television special,^[en] and performed in the U.S., notably in Las Vegas. Throughout his career, he set records for concert attendance, television ratings and record sales.^[de] He is one of the best-selling and most influential artists in the history of popular music. Health problems, a drug dependency^[de] and other factors led to his death at age 42.

Example: Musicians from Tennessee

- is in categories: *American musicians by state, People from Tennessee by occupation, Tennessee culture*
- has subcategories: *Nashville bands, Rappers from Memphis*

→ useful??

Where WordNet comes in

- Remember: WordNet already has a very good taxonomy!
- Take advantage of that: Integrate Synsets!
- How: Each Synset becomes a class of YAGO
- Fit Wikipedia categories into WordNet classes

- **S: (n) musician, instrumentalist, player** (someone who plays a musical instrument (as a profession))
- **S: (n) musician** (artist who composes or conducts music as a profession)
 - *direct hyponym / full hyponym*
 - **S: (n) arranger, adapter, transcriber** (a musician who adapts a composition for particular voices or instruments or for another style of performance)
 - **S: (n) choirmaster, precentor, cantor** (the musical director of a choir)
 - **S: (n) composer** (someone who composes music as a profession)
 - **S: (n) conductor, music director, director** (the person who leads a musical group)
 - **S: (n) virtuoso** (a musician who is a consummate master of technique and artistry)
 - **S: (n) Herbert, Victor Herbert** (United States musician and composer and conductor noted for his comic operas (1859-1924))
 - **S: (n) Ono, Yoko Ono** (United States musician (born in Japan) who married John Lennon and collaborated with him on recordings (born in 1933))
 - **S: (n) Orff, Carl Orff** (German musician who developed a widely used system for teaching music to children (1895-1982))
 - *domain category*
 - *has instance*
 - *direct hypernym / inherited hypernym / sister term*
 - **S: (n) artist, creative person** (a person whose creative work shows sensitivity and imagination)
 - **S: (n) creator** (a person who grows or makes or invents things)
 - **S: (n) person, individual, someone, somebody, mortal, soul** (a human being) "*there was too much for one person to do*"
 - **S: (n) organism, being** (a living thing that has (or can develop) the ability to act or function independently)
 - **S: (n) living thing, animate thing** (a living (or once living) entity)
 - **S: (n) whole, unit** (an assemblage of parts that is regarded as a single entity) "*how big is that part compared to the whole?*"; "*the team is a unit*"
 - **S: (n) object, physical object** (a tangible and visible entity; an entity that can cast a shadow) "*it was full of rackets, balls and other objects*"
 - **S: (n) physical entity** (an entity that has physical existence)
 - **S: (n) entity** (that which is perceived or known or inferred to have its own distinct existence (living or nonliving))

Example - cont.

- Wiki category: Musicians from Tennessee
- „Musicians from Tennessee“ can be regarded as a hyponym of „musicians“
- „musicians“ is in WordNet class *musician*: has hypernyms *artist* → *creator* → *person* → *organism*
- Musicians from Tennessee becomes a subclass of *musician*

Intermission

What have we seen so far:

- The transformation of Elvis Presley into a YAGO entity
- The creation of one „entity-relation-entity“ triple

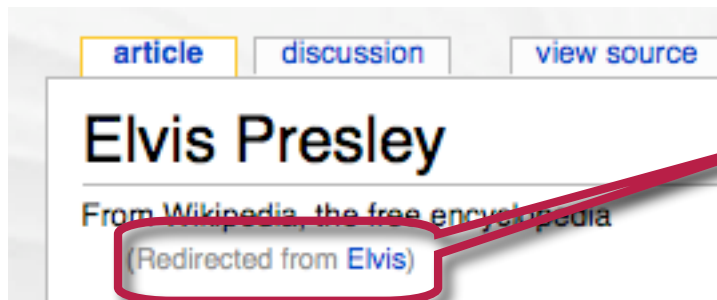

```
Elvis BIRTHDATE 1935-01-08
```

- The integration of WordNet classes into the ontology

What else is there?

- Apart from Elvis Presley: 2,733,684 Wikipedia articles - just in English! (as of Feb. 9th, 2009)
- Every Wikipedia page title (i.e. the subject of every article) is a candidate to become an individual in YAGO!

One more relation

Apparently, „Elvis“ usually refers to the person Elvis Presley!

Let's use this as a relation:

„Elvis“ MEANS *Elvis Presley*

How can we use MEANS?

- Express (and store in the ontology) that various different names may refer to the same concept - more freedom for queries!

„King Of Rock & Roll“ MEANS
Elvis Presley

„King Of Pop“ MEANS *Michael Jackson*

Did you say Queries?

Query Form

YAGO-query:

?id0:	<input type="text" value="?x"/>	isA	<input type="text" value="scientist"/>
?id1:	<input type="text" value="?x"/>	isA	<input type="text" value="musician"/>
?id2:	<input type="text"/>		<input type="text"/>

?musician = [musician](#)
 ?scientist = [scientist](#)
 ?x = [Alexander Borodin](#)

?musician = [musician](#)
 ?scientist = [scientist](#)
 ?x = [Neil J. Gunther](#)

?musician = [musician](#)
 ?scientist = [scientist](#)
 ?x = [Albert Schweitzer](#)

?musician = [musician](#)
 ?scientist = [scientist](#)
 ?x = [William Herschel](#)

*people who are scientists
and musicians*

Summary

- ✓ What are Ontologies?
- ✓ What do they look like?
- ✓ How can they be used?
- ✓ Why should we want to use them?
