INCLUDING NEURAL MODELS OF SCRIPT KNOWLEDGE

Selected Topics in Semantic and Discourse
Professor Dr. Pinkal
Margarita Chikobava

Overview

- Motivation
- Model
 - Event representation
 - Learning to Order
- Experiments
 - Learning from Crowdsourced Data
 - Learning from Natural Text
- Results and Discussion

How was it done before?

- Manual
- Scripts, graphs and chains
- Human interpretable
- Not natural text

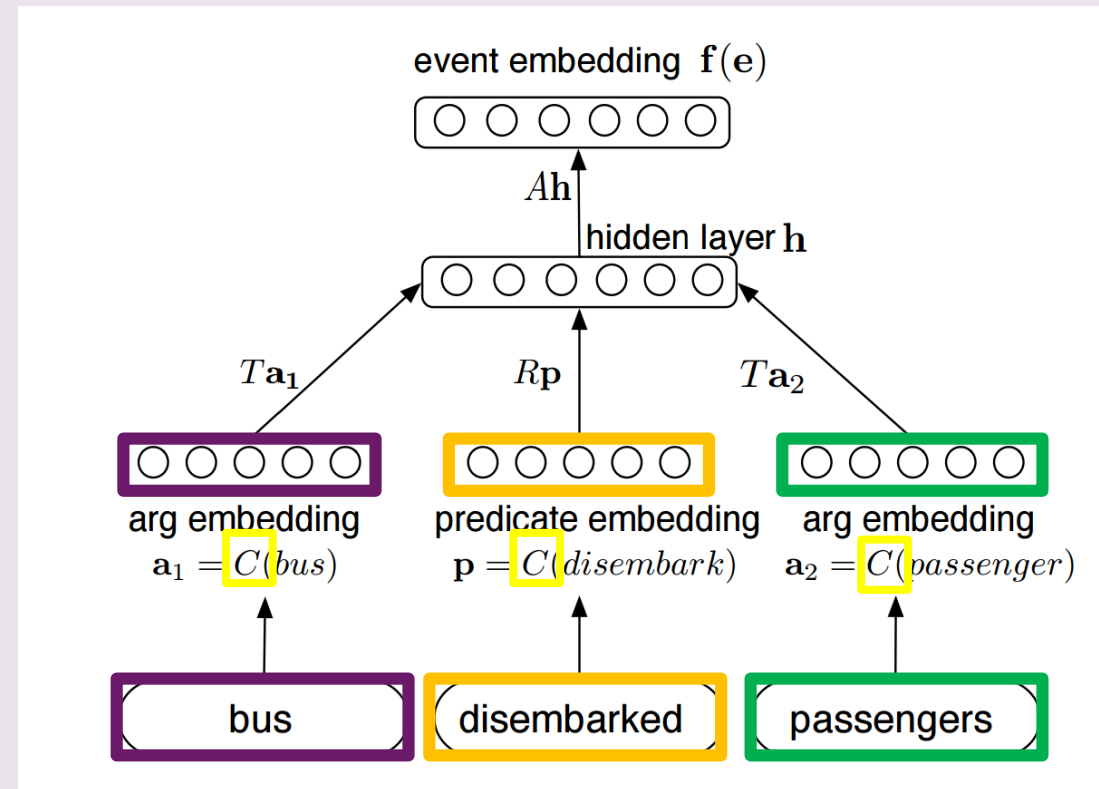

How is it done now?

- Statistical
- Without knowledge representation as a graph
- With distributed representation of event realizations
- Predicates and their arguments
- Capture relevant features (transitivity, particles...)

- Task: Ordering? Two event mentions. Paraphrases of the same event?

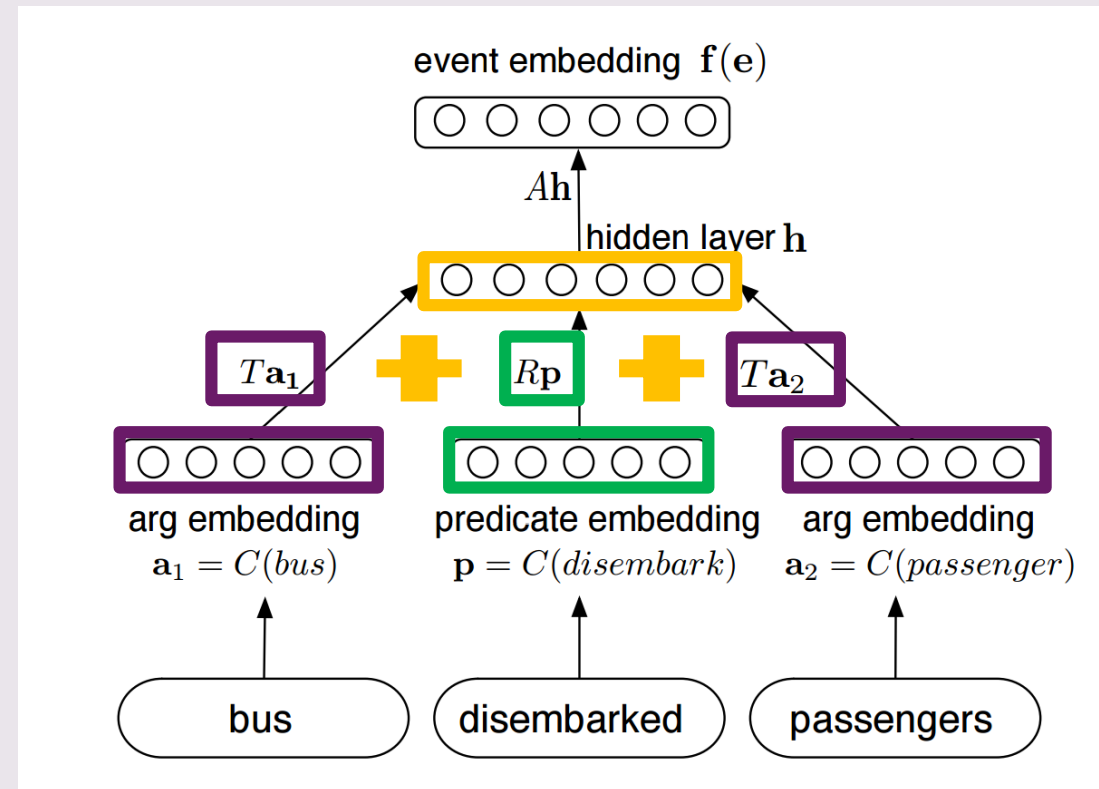

Model. Event Representation

- Simple compositional model:
event = predicate + argument
- Each word c_i in the vocabulary is mapped to a real vector

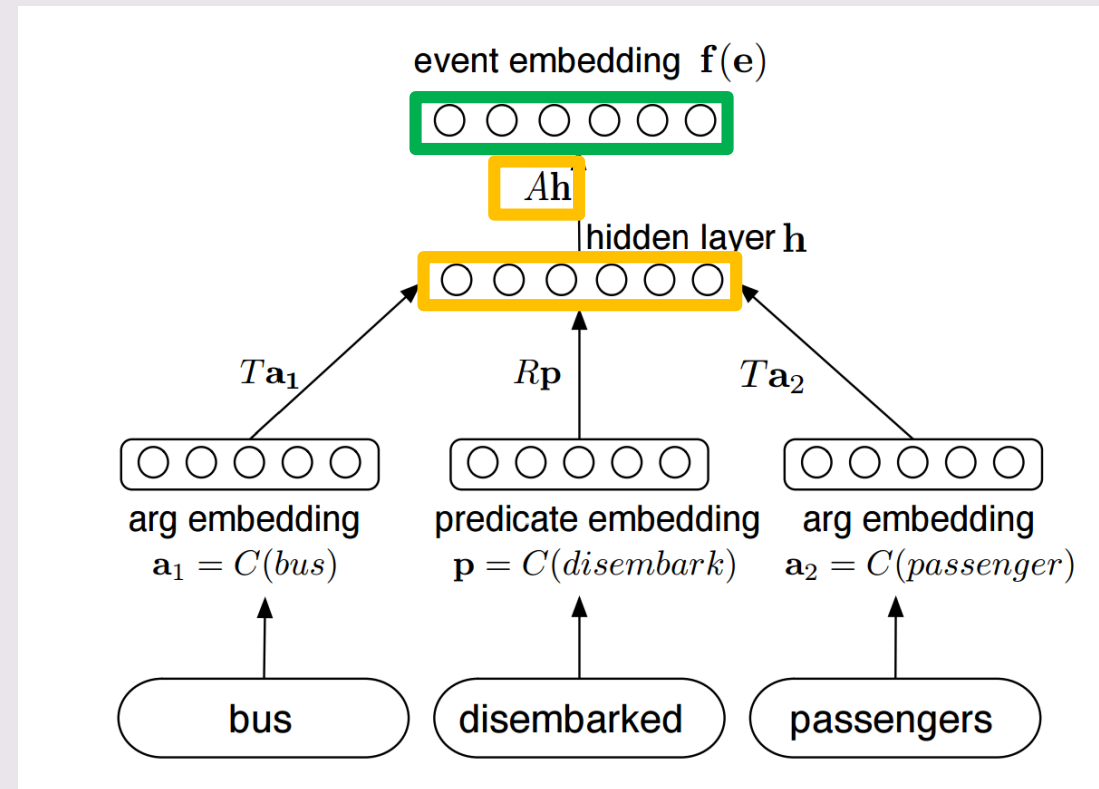

Model. Event Representation

- Simple compositional model: event = predicate + argument
- Each word c_i in the vocabulary is mapped to a real vector
- Hidden layer =
linearly transformed predicate
and argument
summing
+ logistic sigmoid function

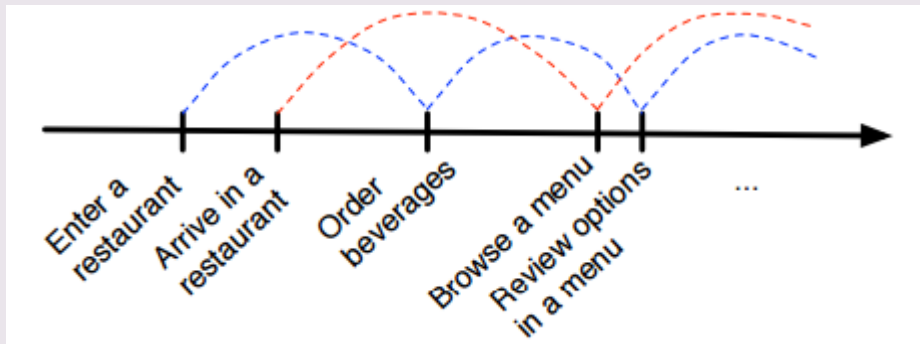

Model. Event Representation

- Simple compositional model: event = predicate + argument
- Each word c_i in the vocabulary is mapped to a real vector
- Hidden layer = summing linearly transformed predicate and argument + logistic sigmoid function
- event representation = linear transformation + sigmoid function

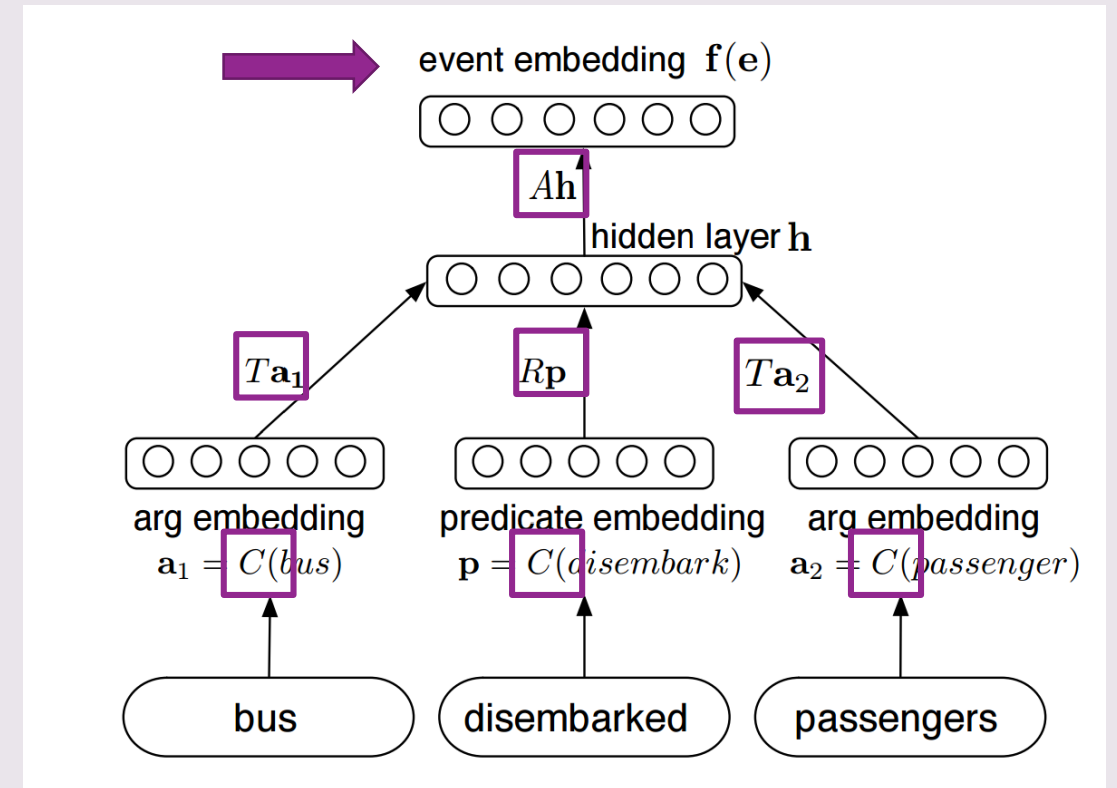

Model. Learning to Order

- Linear ranker w 
- Ranking score

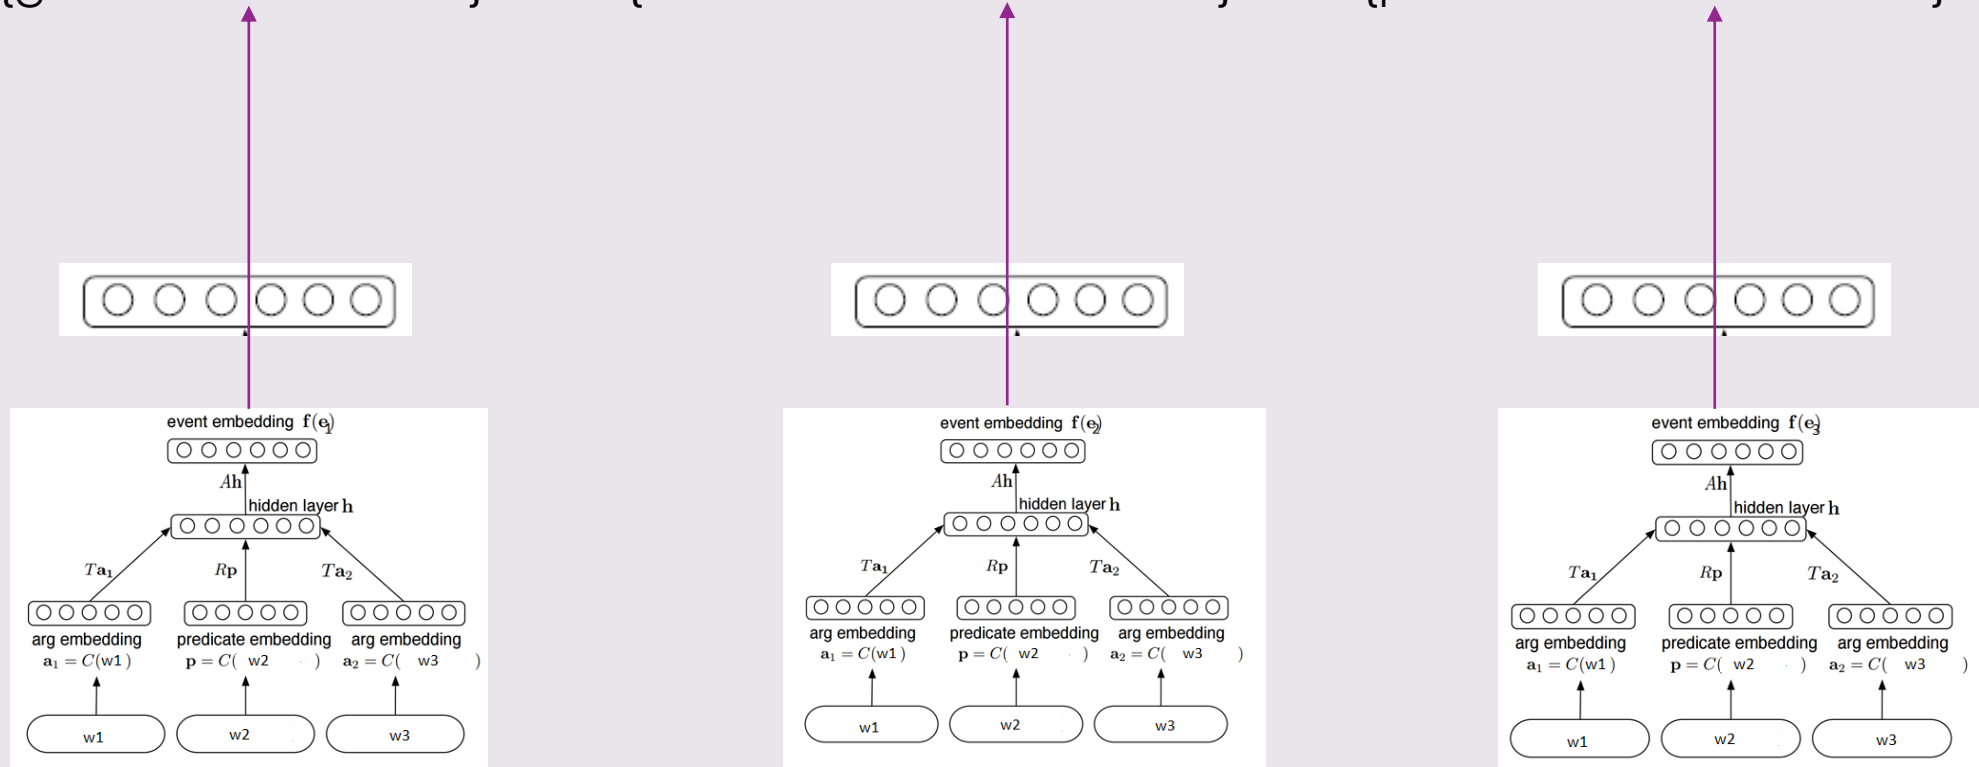

- Representation parameters

Linear ranker

1. {go to coffee maker} → 2. {fill water in coffee maker} → 3. {place the filter in holder}

ranker

Experiments. CD

- Regneri: event sequence descriptions(ESD)
- Scenario \approx 30 ESDs
- Challenging learning task:
 - Limited amount of training data
 - Variability
 - optionality
- 4 scenarios to choose model parameters
- 2000 epochs

{go to coffee maker} → {fill water in coffee maker} → {place the filter in holder} → {place coffee in filter} → {place holder in coffee maker} → {turn on coffee maker}

CD: Results and discussion

| | Precision (%) | | | | | Recall (%) | | | | | F1 (%) | | | | |
|----------------|---------------|--------------------|------|------|-------------|------------|--------------------|------|------|-------------|--------|--------------------|------|------|-------------|
| | BL | EE _{verb} | MSA | BS | EE | BL | EE _{verb} | MSA | BS | EE | BL | EE _{verb} | MSA | BS | EE |
| Bus | 70.1 | 81.9 | 80.0 | 76.0 | 85.1 | 71.3 | 75.8 | 80.0 | 76.0 | 91.9 | 70.7 | 78.8 | 80.0 | 76.0 | 88.4 |
| Coffee | 70.1 | 73.7 | 70.0 | 68.0 | 69.5 | 72.6 | 75.1 | 78.0 | 57.0 | 71.0 | 71.3 | 74.4 | 74.0 | 62.0 | 70.2 |
| Fastfood | 69.9 | 81.0 | 53.0 | 97.0 | 90.0 | 65.1 | 79.1 | 81.0 | 65.0 | 87.9 | 67.4 | 80.0 | 64.0 | 78.0 | 88.9 |
| Return | 74.0 | 94.1 | 48.0 | 87.0 | 92.4 | 68.6 | 91.4 | 75.0 | 72.0 | 89.7 | 71.0 | 92.8 | 58.0 | 79.0 | 91.0 |
| Iron | 73.4 | 80.1 | 78.0 | 87.0 | 86.9 | 67.3 | 69.8 | 72.0 | 69.0 | 80.2 | 70.2 | 69.8 | 75.0 | 77.0 | 83.4 |
| Microw. | 72.6 | 79.2 | 47.0 | 91.0 | 82.9 | 63.4 | 62.8 | 83.0 | 74.0 | 90.3 | 67.7 | 70.0 | 60.0 | 82.0 | 86.4 |
| Eggs | 72.7 | 71.4 | 67.0 | 77.0 | 80.7 | 68.0 | 67.7 | 64.0 | 59.0 | 76.9 | 70.3 | 69.5 | 66.0 | 67.0 | 78.7 |
| Shower | 62.2 | 76.2 | 48.0 | 85.0 | 80.0 | 62.5 | 80.0 | 82.0 | 84.0 | 84.3 | 62.3 | 78.1 | 61.0 | 85.0 | 82.1 |
| Phone | 67.6 | 87.8 | 83.0 | 92.0 | 87.5 | 62.8 | 87.9 | 86.0 | 87.0 | 89.0 | 65.1 | 87.8 | 84.0 | 89.0 | 88.2 |
| Vending | 66.4 | 87.3 | 84.0 | 90.0 | 84.2 | 60.6 | 87.6 | 85.0 | 74.0 | 81.9 | 63.3 | 84.9 | 84.0 | 81.0 | 88.2 |
| Average | 69.9 | 81.3 | 65.8 | 85.0 | 83.9 | 66.2 | 77.2 | 78.6 | 71.7 | 84.3 | 68.0 | 79.1 | 70.6 | 77.6 | 84.1 |

Table 1: Results on the crowdsourced data for the verb-frequency baseline (BL), the verb-only embedding model (EE_{verb}), Regneri et al. (2010) (MSA), Frermann et al. (2014)(BS) and the full model (EE).

Paraphrasing

- Mapping event to the position on the time line
- Simplifying assumption: intervals do not overlap
- Constraint: same ESD \rightarrow not the same interval 
- Simple greedy algorithm
- Modification

Paraphrasing

- Not using external knowledge
- Not very robust to noise

| Scenario | F1 (%) | | | |
|-------------------|--------|-------------|------|------|
| | APBL | MSA | BS | EE |
| Take bus | 53.7 | 74.0 | 47.0 | 63.5 |
| Make coffee | 42.1 | 65.0 | 52.0 | 63.5 |
| Order fastfood | 37.0 | 59.0 | 80.0 | 62.6 |
| Return food back | 64.8 | 71.0 | 67.0 | 81.1 |
| Iron clothes | 43.3 | 67.0 | 60.0 | 56.7 |
| Microwave cooking | 43.2 | 75.0 | 82.0 | 57.8 |
| Scrambled eggs | 57.6 | 69.0 | 76.0 | 53.0 |
| Take shower | 42.1 | 78.0 | 67.0 | 55.7 |
| Answer telephone | 71.0 | 89.0 | 81.0 | 79.4 |
| Vending machine | 56.1 | 69.0 | 77.0 | 69.3 |
| Average | 51.1 | 71.6 | 68.9 | 64.5 |

Experiments. NT

- Gigaword corpus - news
- Explicit clues (then, after...)
- Ordered pairs
- Training

- Preprocessing
 - rule-based temporal classifier
 - No clues No semantic differences
 - No information about order in the text

| | Accuracy (%) |
|--------------------------|---------------------|
| BL | 60.7 |
| CJ08 | 60.1 |
| EE_{verb} | 75.9 |
| EE | 83.5 |

Summary

- Interesting? Statistical model for prototypical event ordering
- New? Without representation as a script
- Well done? Outperforms baselines

- Practical? Paraphrasing. Ordering
