Language Technology II
SS 2012

Exercises 2

- Implement “IBM model 0” in a programming language of your choice and try it on the example discussed today (make sure the results agree!).
- Apply your program to the two files ep.de and ep.en and run three iterations. Generate a table of the values $p(en|de)$ for all relevant word pairs.
- Send the code and the results via email to sabine.hunsicker@dfki.de
- Due: June 14th
