# The FrameNet Project

- Creating a highly detailed lexicon of English based on Frame Semantics
- Related projects for German, Spanish, Japanese, Italian, B.
   Portuguese, ...
- Human- and machine-readable output
- Documenting the combinatory potential of nouns, verbs, adjectives, etc by manually annotating corpus examples

# Frame-Semantik als Theorie

- A non-modular theory of meaning; assumes no distinction between linguistic semantics and conceptualization
- A holistic theory of meaning (cf. Gestalt-psychology); not looking to decompose meaning into features (Merkmale)

- Experientialist and ethnographic
- Encoding view rather than decoding view

## Semantische Merkmale ...

	Weiblich	Männlich
Kuh	Kuh/cow	Stier/bull
Schaf	Zibbe, Mutterschaf/ewe	Schafbock/ram
Katze	Katze/cat	Kater/tomcat
Hund	Hündin/bitch	Rüde/male dog

# ... reichen nicht immer: Nichtgläubige/Non-believers

- Apostasie/apostasy (v. Kirchentreue)
- Häresie/heresy (v. Orthodoxie)
- Non-theist (v. Theismus/theism)
- Agnostizism/agnosticism (cf. skepticism)

Atheismus/atheism

## Semantische Frames: kleine Geschichten

 Frame: Semantic frames are schematic representations of situations involving various participants, props, and other conceptual roles, each of which is called a frame element (FE)

- The situations include events, states, and relations
- Frames are connected to each other via frame-to-frame relations

# Frame Elements (FEs)

- Frame Element (FE): The participants, props and roles of a frame. These can include agents, inanimate objects, elements of the setting, and properties/parameters of the situation
- The syntactic dependents (broadly construed) of a predicating word correspond to the frame elements of the frame (or frames) associated with that word.
- Each FE is defined relative to a single frame.
  - FN does not assume a set of universal semantic roles that applies to all predicates
  - Any connections between FEs of different frames have to be made explicitly.

# Lexical Unit (LU)

- The pairing of a morphological lemma with a meaning; a word sense.
- The meaning is *partially* expressed by the relation between the lemma and a FN frame, i.e. between lexical form(s) and the semantic frame they evoke.
- Includes inflected forms sehen, sieht, gesehen
- Includes multi-word expressions (MWEs): Abflug machen, rot sehen, etc.

 May be any part of speech: verbs, nouns, adjectives, prepositions, etc. (wie.prep, ähnlich.a, gleichen.v, Unterschied.n)

# Example: Revenge frame

- This frame concerns the infliction of punishment in return for a wrong suffered. An Avenger performs a Punishment on a Offender as a consequence of an earlier action by the Offender, the Injury.
- The Avenger inflicting the Punishment need not be the same as the Injured\_Party who suffered the Injury, but the Avenger does have to share the judgment that the Offender's action was wrong.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

The judgment that the Offender had inflicted an Injury is made without regard to the law.

# Revenge Frame: Annotation

- [They AVENGER] took revenge [for the deaths of two loyalist prisoners INJURY]
- The next day, [the Roman forces AVENGER] took revenge [on their enemies OFFENDER]...
- [The ban PUNISHMENT] is [Prince Charles's AVENGER] revenge [for her refusal to spend Christmas with the rest of the royals... INJURY]

## Example: Revenge LUs

FE-to-FE relations

# Defining frames, or How to divide up experience

- Encoding view: which words are used to talk about X?
- Challenge: knowing which X's there are
- Making frame distinctions is to some degree a craft/art rather than a science
- The guiding principle for frame division is that lexical units in a frame should be (near)-paraphrases

#### How to ensure paraphraseability

- Lexical units should have same number and types of frame elements in explicit and implicit contexts
- LUs should have same perspective (kaufen v. verkaufen)
- Interrelations between participants should be the same for all LUs (e.g. Purpose FEs)
- Basic ontological type for a frame element ought to be broadly constant across uses – FN treats the difference between *want ice cream* and *want to eat ice cream* by having metonymically related FEs in an Excludes relation)
- To some degree, take into account selectional preferences (Mass motion (fliessen, strömen, rauschen))
- LUs should entail and presuppose the same events/states

## What doesn't lead to frame distinctions

- Deixis (bringen v. holen [Bringing frame])
- Register (verpfuschen v. Scheisse bauen)
- Antonymy (heiss v. kalt; loben v. tadeln)
- Variety/dialect (Brötchen v. Semmel)
- Syntactic constructions (e.g. active v. passive voice)

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

# Annotation I

- Two types of annotations
  - lexicographic annotation
    - unrelated sentences containing a particular lexical unit
    - annotators select clear examples
  - annotation of full-text/running-text for all predicates and their frames
    - all lemmas for which there is an analysis are annotated
    - all instances have to be labeled, not just the clear ones

# Annotation II

- No complete sense inventory
- Mostly only one annotator
- Automatic consistency checks
- Some human checking
- Occasional agreement testing

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

# Annotation III

- There is a chance of feedback from Annotation to Vanguarding
- The people who define frames also annotate, or used to annotate
- Team members share offices, it's easy to discuss
- Most team members are students of linguistics
- Frame development can thus be an iterative process

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

## Salsa workflow

- Annotation on top of syntactic trees with different tool
- Two annotators, two adjudicators, final meta-adjudication
- Exhaustive annotation of all tokens, not just good examples
- Complete coverage constraint
  - All senses of a lemma have to be annotated
  - Uses FrameNet inventory to the degree possible: if a Frame exists, annotators are pointed to the English description

 Missing frames are handled by making proto-frames (Unknown-frames)

- Project has an applied focus
- Less focus on creation of new frames, linguistic analysis
- Clearer division of labor between vanguard and annotators

(ロ)、(型)、(E)、(E)、 E) のQの

Can't this be done faster, cheaper, automatically?

Can't get rid of vanguarding

- FN does not and cannot re-use on existing sense inventories since there isn't one that follows frame semantics
- FN wants to be really accurate about the number and nature of the participants in each frame.

- unsupervised learning can only take you so far; FN believes human judgment has a role to play
- Efforts at semi-automatic, rule-based annotation not that successful
  - Pre-annotate collocates with FEs

## Efforts to automate Frame(Net)-related tasks

- Frame Assignment as Word Sense Disambiguation
- Automatic semantic role labeling (ASRL)
- LU induction (finding new LUs for known frames)
- Frame induction (finding new frames with their FEs)
