## WiSe 2024/2025

### Exercise 8: Prosodic Analyses & Manipulation of pitch and duration

Dez 16, 2024

Bernd Möbius & Valentin Kany

Language Science and Technology  
Saarland University

# Prosodic Analyses

# What is this?

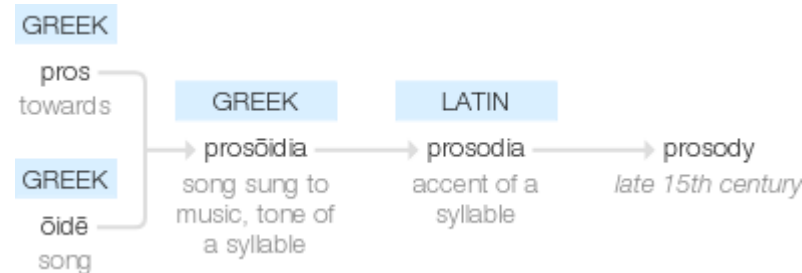

# Exercise 1: Goal or no goal?

# How did you know? What did you base your decision on?

# Prosody

- Study of elements of speech that are not individual phonetic segments (suprasegmentals)
- Properties of syllables and larger units of speech:
  - Intonation
  - Stress
  - Rhythm
- Aspects to measure:
  - F0 over time, pitch contour
  - Intensity (over time, patterns)
  - Quantity (duration of speech units)

# Exercise 2: Prosodic analysis

- Have a look at the audio recording of the commentator (commentary.wav) in Praat
- Pay attention to these three main aspects of prosody:
  1. Intonation
  2. Quantity
  3. Intensity
- Measure the pitch range and speech rate in the audio file

## Exercise 3: Without listening! – Visible prosody

- How do the three recordings (Tor1, Tor2, Tor3.wav) of the utterance **"Ich habe ein Tor geschossen"** differ from each other in terms of pitch contour, intensity pattern and speech rate?
- Which utterance belongs to which recording?

Did I really just  
score a goal?

Question

I scored a goal.

Statement

I am the one who  
scored a goal.

Emphasizing the subject

## Exercise 3: Without listening! – Visible prosody

- Which utterance belongs to which recording?

Did I really just  
score a goal?

Question

I scored a goal.

Statement

I am the one who  
scored a goal.

Emphasizing the subject

- Open the recordings + the TextGrids with Praat and find out which syllable is marked by f0 peak and high mean intensity
- Measure the speech rate (in syllable/second)

# Exercise 3: Observations

1

? I C		h a: b @		? a I n		t o: 6		g @ S O s @ n	
		?IC	ha:	b@	?aln	to:6	g@	SO	s@n
F0 peaks	1								
	2								
	3								
High mean intensity	1								
	2								
	3								
Speech rate (syllables per second)	1								
	2								
	3								

# Exercise 3: Observations

1

? I C		h a: b @		? a I n		t o: 6		g @ S O s @ n	
		? I C	ha:	b @	? a I n	to:6	g @	SO	s @ n
F0 peaks	1	X							
	2								
	3								
High mean intensity	1								
	2								
	3								
Speech rate (syllables per second)	1								
	2								
	3								

# Exercise 3: Observations

1

? I C		h a: b @		? a I n		t o: 6		g @ S O s @ n	
		?IC	ha:	b@	?aln	to:6	g@	SO	s@n
F0 peaks	1	X							
	2								
	3								
High mean intensity	1	X <sub>(not really)</sub>							
	2								
	3								
Speech rate (syllables per second)	1								
	2								
	3								

# Exercise 3: Observations

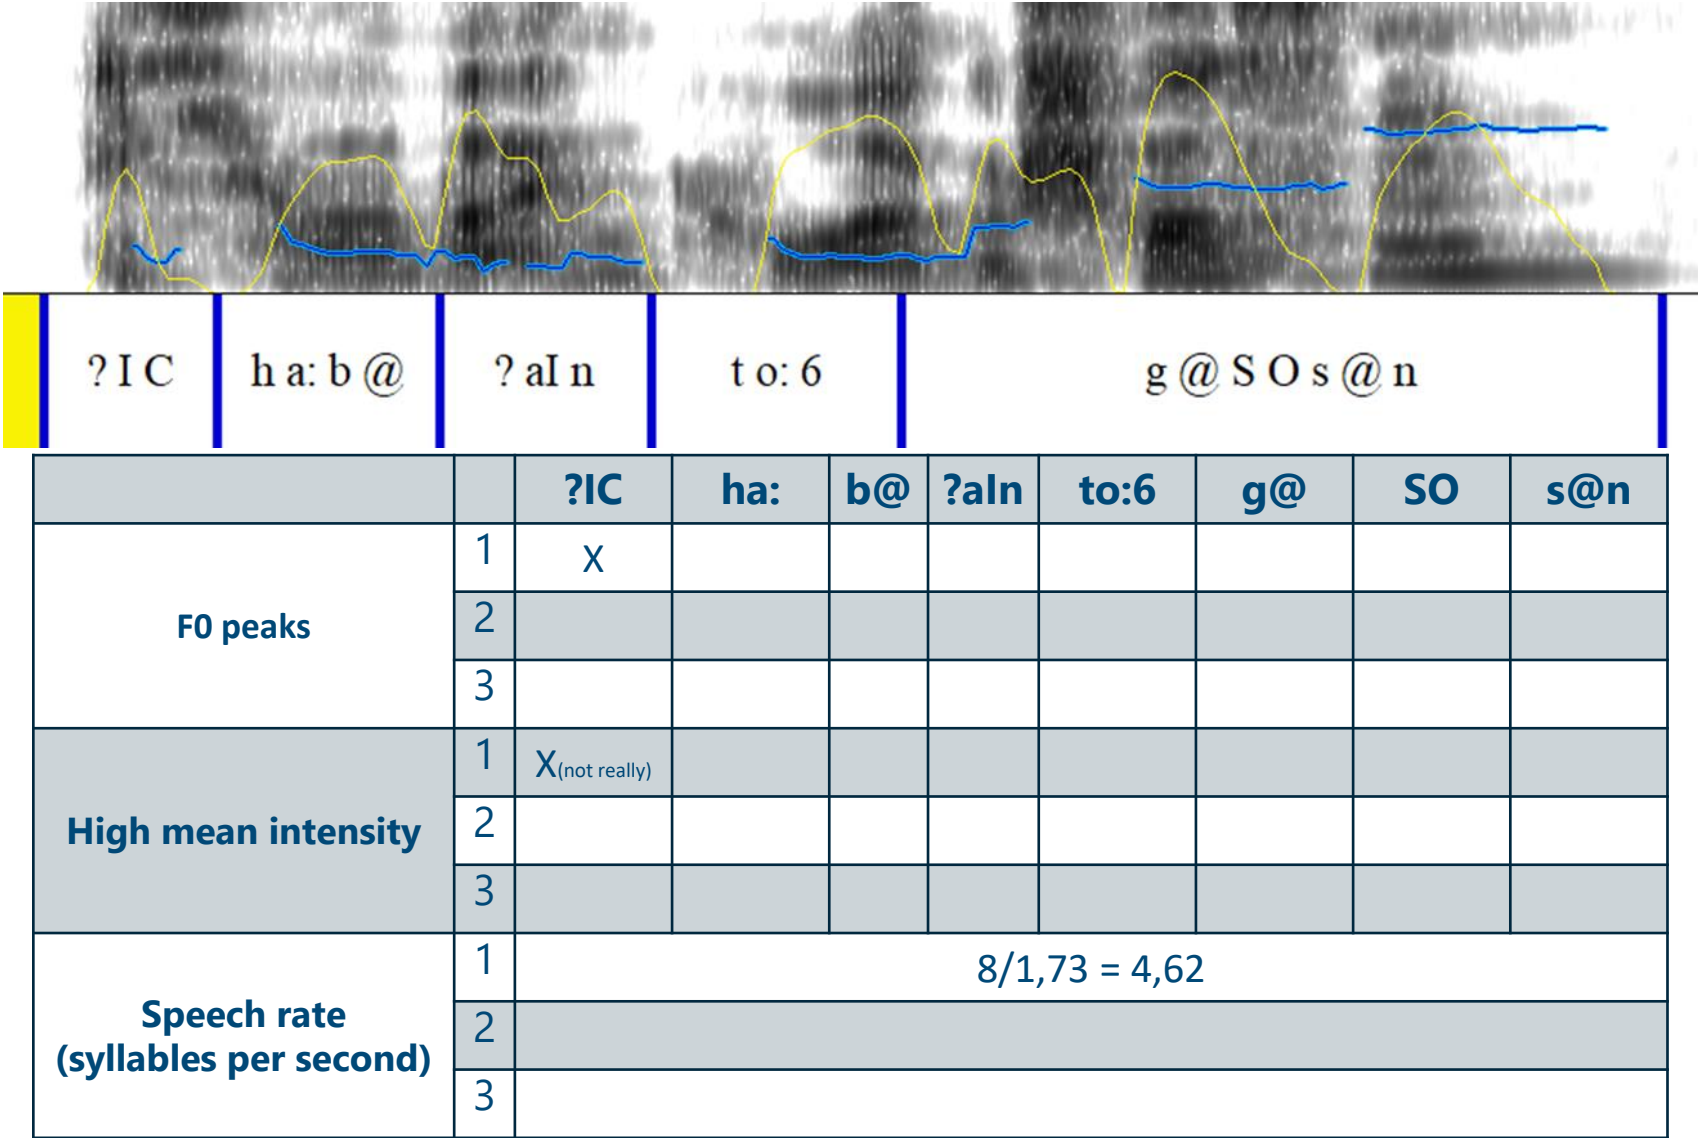

1

? I C		h a: b @		? a I n		t o: 6		g @ S O s @ n	
		?IC	ha:	b@	?aln	to:6	g@	SO	s@n
F0 peaks	1	x							
	2								
	3								
High mean intensity	1	X <sub>(not really)</sub>							
	2								
	3								
Speech rate (syllables per second)	1	8/1,73 = 4,62							
	2								
	3

# Exercise 3: Observations

3

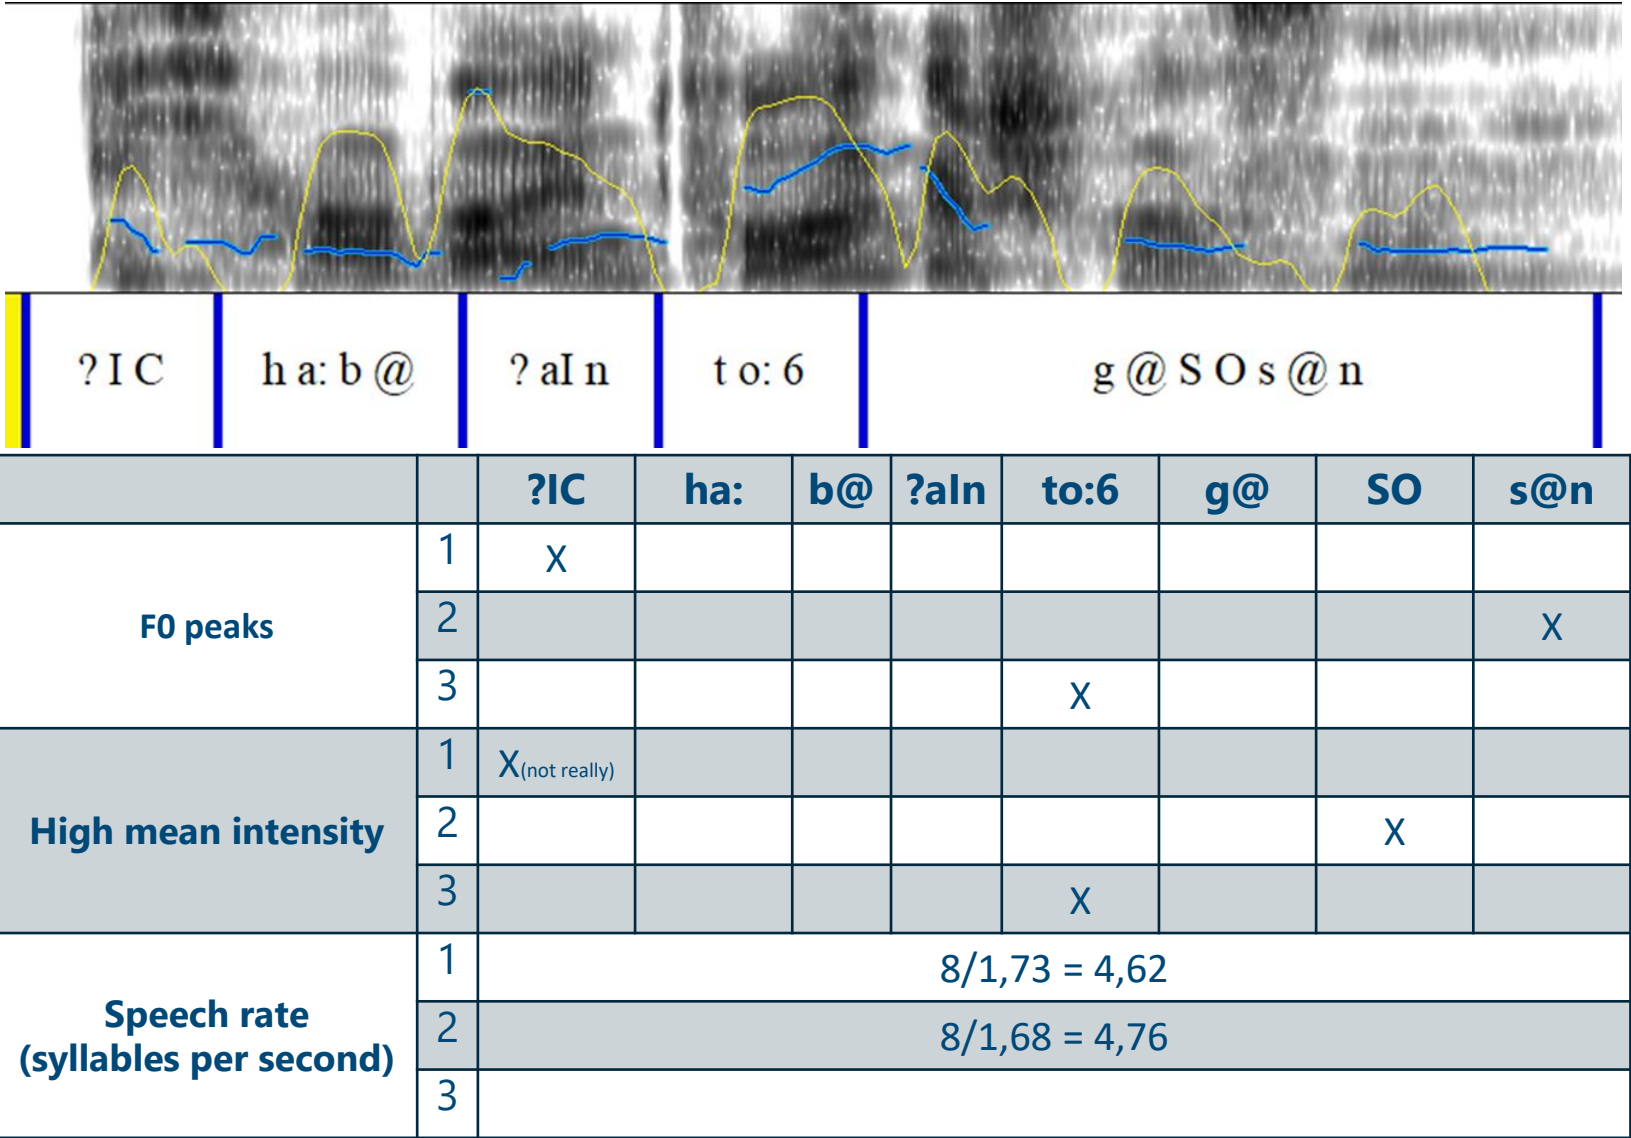

# Exercise 3: Observations

Did I really just  
score a goal?

Question

I scored a goal.

Statement

I am the one who  
scored a goal.

Emphasizing the subject

		?IC	ha:	b@	?aln	to:6	g@	SO	s@n
F0 peaks	1	X							
	2								X
	3					X			
High mean intensity	1	X <sub>(not really)</sub>							
	2							X	
	3					X			
Speech rate (syllables per second)	1	8/1,73 = 4,62							
	2	8/1,68 = 4,76							
	3	8/1,60 = 5,00							

# Exercise 3

1

I am the one who scored a goal.

Emphasizing the subject

2

Did I really just score a goal?

Question

3

I scored a goal.

Statement

# Manipulation of pitch and duration

- Select *Sound object*, click **Manipulate** → **To Manipulation...**
- For female voice: set minimum pitch to 100 Hz, maximum pitch to 500 Hz
- For male voice: set range to 75-300 Hz
- Open resulting *Manipulation object* by clicking View & Edit

# Manipulation of pitch and duration

- Reduce number of dots: **Pitch** → **Stylize pitch (2st)**
- Create additional dots: **Pitch** → **Add pitch point at cursor** or **Pitch** → **Add pitch point at...**
- Manually relocate dots within the time-pitch area
- Extract the modified sound as separate object: **File** → **Publish resynthesis**

- Add targets to empty tier: **Dur** → **Add duration point at cursor**  
or **Dur** → **Add duration point at...**
- Manually relocate dots within the time-pitch area
- Blue dotted line: value of 1 = original speech rate
- Create speech half as fast = 2; Create speech twice as fast = 0.5
- Extract the modified sound as separate object: **File** → **Publish**  
**resynthesis**

# Exercise 4

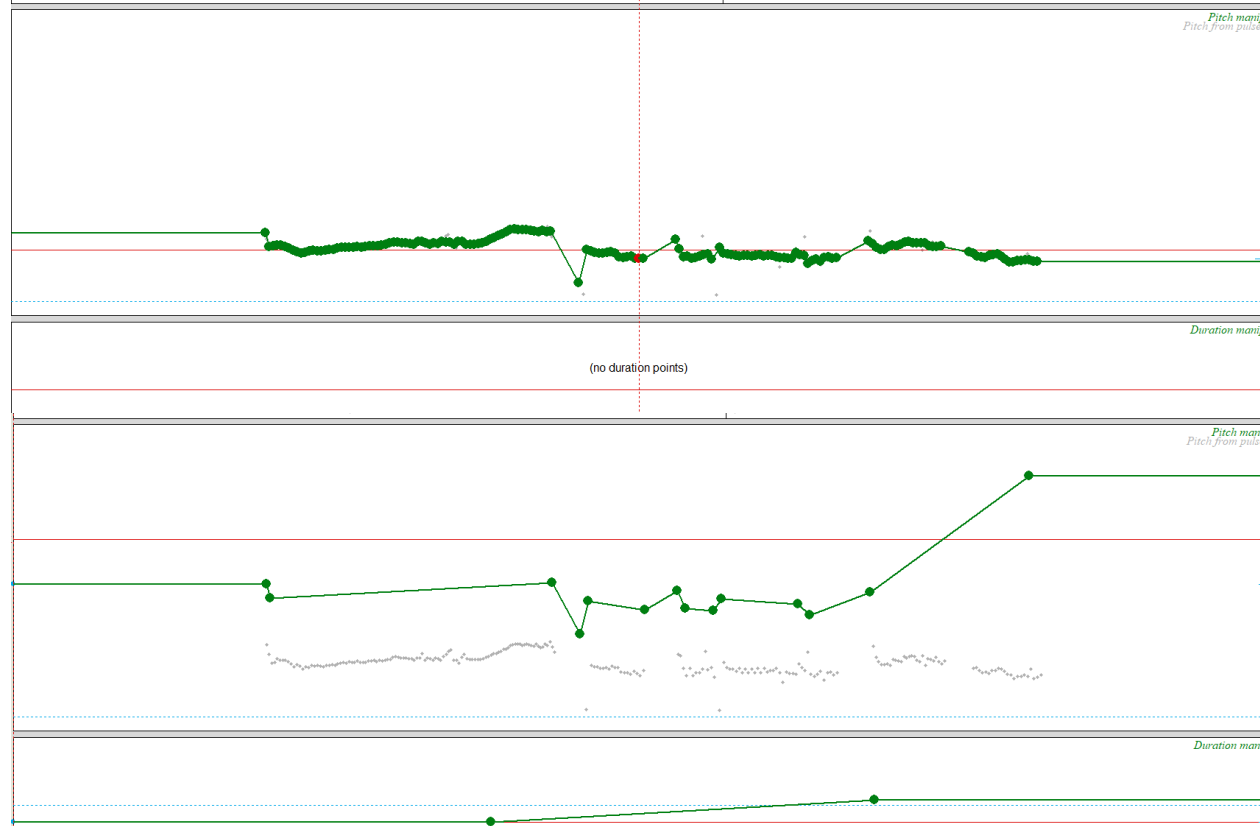

Modify the sound file (presents.wav) in a way that makes it sound like a question asked by a high-pitched male who starts the sentence with a relatively fast speaking rate and becomes slower towards the end of the sentence.

# Manipulation of pitch and duration

Original

Manipulation

# Assignment 7: Have wonderful holidays!

Thank you for your participation!
