HPSG from a Linguistic Perspective

From a linguistic perspective, an HPSG consists of

- A lexicon
licensing basic words
- Lexical rules
licensing derived words
- Immediate dominance (ID) schemata
licensing constituent structure
- Linear precedence (LP) statements
constraining word order
- A set of grammatical principles
expressing generalizations about linguistic objects

The Signature

- Defines the ontology
 - Which kind of objects are distinguished
 - Which properties are modeled
- Consists of
 - Type inheritance hierarchy
 - Appropriate features and constraints on types

Linguistic Description

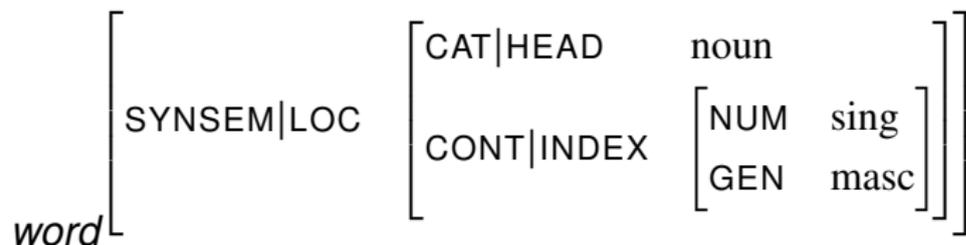

- Linguistic theories are described using AVMs: description language of TFS
- A set of description statements comprises the constraints on what are the admissible linguistic objects (iff there is corresponding well-formed TFS satisfying all the constraints)

Description Example

A verb, for example, can specify that its subject be masculine singular:

(1) Ya spal.
I_{masc.sg} slept_{masc.sg}

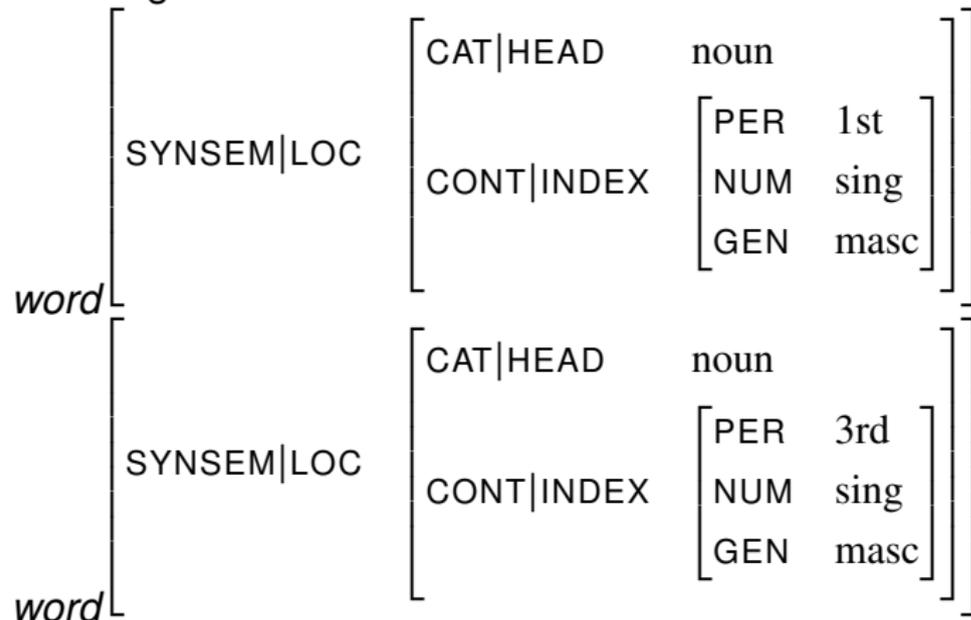

(2) On spal.
He_{masc.sg} slept_{masc.sg}

This AVM specifies the “partial” constraints on the complete (totally well-typed) feature structure of the subject

Subsumption

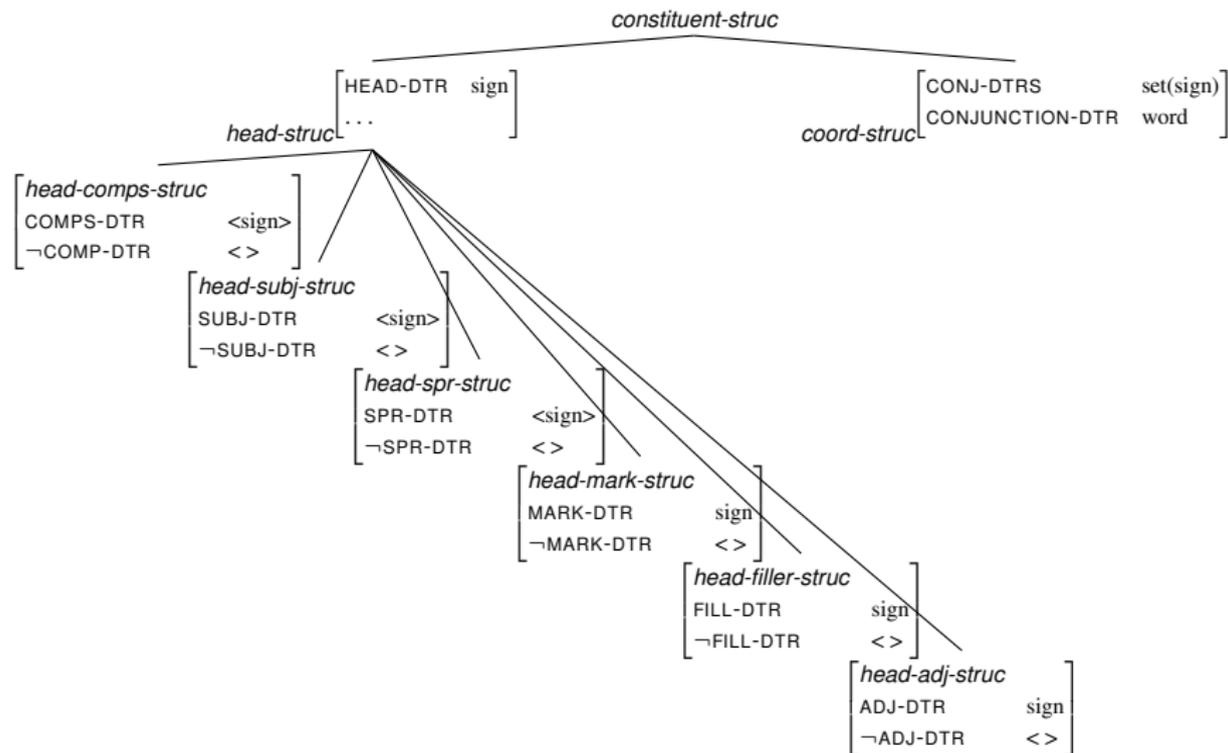

The AVM description on the previous slide subsumes both of the following AVMs

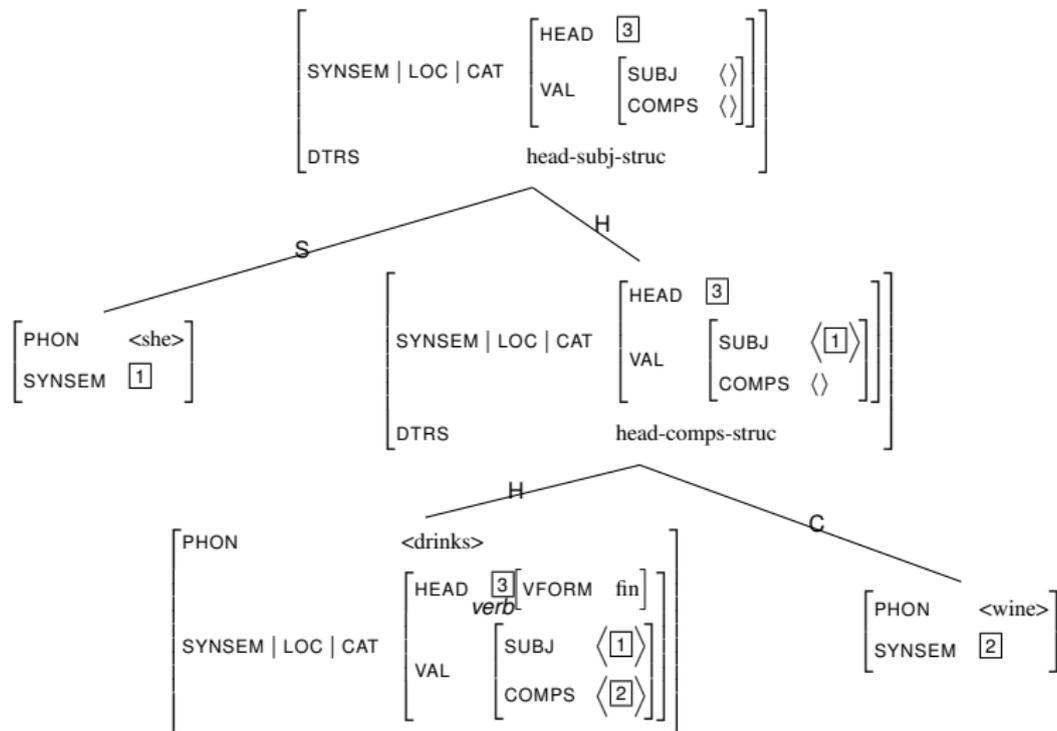

Types of Phrases

- Each *phrase* has a DTRS attribute which has a *constituent-structure* value
- This DTRS value corresponds to what we view in a tree as daughters (with additional grammatical role information, e.g. adjunct, complement, etc.)
- By distinguishing different kinds of *constituent-structures*, we can define different kinds of constructions in a language

An Ontology of Phrases

A Sketch of Head-Subject/Complement Structures

Universal Principles

How exactly did the last example work?

- *drink* has head information specifying that it is a finite verb and subcategories for a subject and an object
 - The head information gets percolated up (the HEAD feature principle)
 - The valence information gets “checked off” as one moves up in the tree (the VALENCE principle)

Such principles are treated as linguistic universals in HPSG

HEAD-Feature Principle

HEAD-feature principle

The value of the HEAD feature of any headed phrase is token-identical with the HEAD value of the head daughter

$$phrase \left[\begin{array}{l} \text{DTRS} \quad \text{head-struct} \end{array} \right] \rightarrow \left[\begin{array}{l} \text{SYNSEM} \mid \text{LOC} \mid \text{CAT} \mid \text{HEAD} \quad \boxed{1} \\ \text{DTRS} \mid \text{HEAD-DTR} \mid \text{SYNSEM} \mid \text{LOC} \mid \text{CAT} \mid \text{HEAD} \quad \boxed{1} \end{array} \right]$$

VALENCE Principle

VALENCE principle

In a headed phrase, for each valence feature F , the F value of the head daughter is the concatenation of the phrase's F value with the list of F -DTR's SYNSEM

$$\left[\text{DTRS headed-structure} \right] \rightarrow \left[\begin{array}{l} \text{SYNSEM} \mid \text{LOC} \mid \text{CAT} \mid \text{VAL} \mid F \quad \boxed{1} \\ \text{DTRS} \quad \left[\begin{array}{l} \text{HEAD-DTR} \mid \text{SYNSEM} \mid \text{LOC} \mid \text{CAT} \mid \text{VAL} \mid F \quad \boxed{1} \oplus \langle \boxed{2} \rangle \\ \text{F-DTR} \mid \text{FIRST} \mid \text{SYNSEM} \quad \boxed{2} \end{array} \right] \end{array} \right]$$

- F can be any one of SUBJ, COMPS, SPR
- \oplus stands for list concatenation:

$$\begin{aligned} \text{elist} \oplus \boxed{1} &:= \boxed{1} \\ \langle \boxed{1} \mid \boxed{2} \rangle \oplus \boxed{3} &:= \langle \boxed{1} \mid \boxed{2} \oplus \boxed{3} \rangle \end{aligned}$$

- When the F -DTR is empty, the F valence feature of the head daughter will be copied to the mother phrase

Fallout from These Principles

- Note that agreement is handled neatly, simply by the fact that the SYNSEM values of a word's daughters are token-identical to the items on the VALENCE lists
- How exactly do we decide on a syntactic structure?
- Why the subject is checked off at a higher point in the tree?

Immediate Dominance (ID) Principle & Schemata

ID Principle

Every headed phrase must satisfy exactly one of the ID schemata

- The exact inventory of valid ID schemata is language specific
- We will introduce a set of ID schemata for English
